TOP 10 REASONS WHY YOU SHOULD BUY A

BALE WRAPPER

COMPETITION

COMPETITION

- Five (5) points of support on turntable: Four heavy duty rollers add stability and support to the perimeter of the turntable in addition to the main central shaft. This allows Tanco wrappers to safely wrap the heaviest silage bales on rough or uneven ground. **Competition uses one central shaft to support the entire turntable mechanism.**
- Single solid belt on turntable: The single belt enables Tanco wrappers to effectively wrap misshapen or soggy bales providing a positive surface for bale rotation. **Competition uses either no belts between rollers, or multiple belts which can allow bales to sag and slip.**
- Adjustable extendable axle: On trailed models the extendable axle provides a wide, stable wheel base when loading bales. Eliminates the need for counterweights. **Competition must add counterweights or tandem axles as options to effectively handle silage bales.**
- Top rollers on turntable: Extra rollers provide security to keep bales in place when wrapping at high RPM's (25) or on uneven terrain. **Competition - None.**
- Unloading ramp on trailed models: The ramp allows bales to be unloaded gently. When a wrapped bale falls hard it can "burp". Once it "burps" the bale does not re-seal. The ramp gives a smooth transition between the ground and turntable. **Competition - optional drop mats are available.**
- Turntable braking System: When unloading wrapped bales its important that the turntable doesn't move out of position. A twisted turntable can offload a bale crooked, exposing it to possible tearing of plastic on frame parts. Tanco machines are equipped with a braking system that holds the turntable in place when unloading bales. **Competition - either no system, or rely on hydraulics to hold the turntable.**

- Film indexing system: As temperature rises, plastic stretches more. To ensure proper overlap and complete coverage when it's hot outside, Tanco machines are equipped with an exclusive, simple, indexing system to compensate for those times. The operator can eliminate potential "windows" in the wrapping procedure. **Competition - None.**
- Positive bale positioning: while being wrapped, bales are rotated the exact distance required to obtain optimum coverage. **Competition uses continuous hydraulic advance. Bales can slip or over-rotate giving an uneven wrap.**
- Durability:** Tanco's subframe is the heaviest of any machine available in North America. The low profile design keeps silage bales closer to the ground with a low center of gravity for stability. Tanco's features are the result of years of experience and input from hundreds of individual, and commercial users in Europe. **Competition - Compare.**
- Prices:** From a basic 3 point Model AW200, to the trailed Model AW400 with automatic cut & start, bale and batch counter, and tractor seat controls, Tanco prices for 1993 are lower than ever. Pay less for more features and durability than any other bale wrapper on the market. **Competition - Compare.**

**SOMETHING TO CROW ABOUT...
LOW CLASSIFIED RATES WITH EXCELLENT RESULTS!**
