Labs Prepare

COLUMBUS, C
 Effective July 1, the regulatory level for somatic cell counts (SCC) in Grade A bulk tank milk will drop from a million per milliliter down to 750,000.
 DHIA laboratories are prepared to accurately measure individual cow SCC levels to determine which cows are increasing the total tank level.

Due to the increasing need for accurate cell counting, National DHIA developed the Quality Certification Program. DHIA labs must participate in monthly tests of blind or unknown samples to measure the accuracy of the instrument measurement.

The accuracy level of instruments nationwide has steadily improved for SCC, fat and protein reading.

Instrument sensitivity is such that allowable tolerance variation is down to 1/4 of what it had been just a few years ago.

Further incentive for reduction of SCC is that it has been shown through research that milk and milk component production continues to increase as SCC drops below the 150,000 SCC level. This was indicated in a study conducted by Heald, et al.

Contact the local DHIA affiliate for more information on the DHIA-SCC program.

WHY ARE SO MANY ADDING TWO-WAY MOBILES?

"We added a two-way mobile radio system to improve our overall service. Avoiding costly downtime makes our customers, and us, more productive. With our Clearchannel system our service technicians are never out of touch."

Phil Wimer
 Partner/Parts Manager
 Landis Bros. Inc.

Why are more and more farms and businesses adding Clearchannel® mobile communications? Because they discovered the cost saving efficiencies two-way radio provides.

Access your personnel readily, reduce costly delays, and react immediately to emergency needs from any location.

Don't get caught short in your busy season without good communications. See why so many are adding a Clearchannel mobile system. Call Triangle Communications for a demonstration in September and become eligible for a Bahamas vacation.
