

# Tractor Line Ranges From 17-35 H.P.

NORCROSS, Ga. — Massey Ferguson is introducing six new compact tractors from 17 to 35 horsepower that meet customer needs for more operator comfort, greater ease-of-use, and improved productivity.

A wide range of implements make these tractors useful on the farm, on light construction and landscape sites, at parks and schools, and at home.

## MF 1210, 1220, 1230

These rugged, workhorse compacts have 3-cylinder, naturally aspirated diesel engines, water-cooled for longer life. The lugging ability of these engines practically eliminates the need to downshift in tough field conditions.

Choose from a standard gear or hydrostatic transmission. The standard transmission has an easy, straight line pattern between first and reverse, and a wide gear range that lets you select the speed best suited for the job.

The hydrostatic transmission features easy, single pedal control of changes between forward and reverse without clutching. An optional creeper gear for special applications is available for the standard transmission.

A mid-mount PTO operates at 2,000 rpm and drives mid-mount mowers. The rear PTO operates at 540 rpm and drives many of the same implements used by big farm tractors.

## MF 1240, 1250, 1260

Heavy-duty 3-cylinder diesel engines have high torque backup and a wide operating range. They operate at lower speeds to reduce wear on internal engine parts for longer life.

A unique, 16-speed, synchro-shuttle transmission has 3rd and 4th gears synchronized for shifting-on-the-go in those gears. The synchro-shuttle with single lever shifting between forward and reverse make front loader applications fast, smooth and effortless. A creeper gear is built into the transmission.

## New MF 1200 Series Tractors

- MF 1210 - 17 hp
- MF 1220 - 20 hp
- MF 1230 - 25 hp

- MF 1240 - 25 hp
- MF 1250 - 30 hp
- MF 1260 - 35 hp

These tractors are equipped with a rear, independent, electro-hydraulic actuated PTO operated by an easy-to-engage toggle switch at the steering column. An optional forward-facing mid-mounted PTO is available.

### Features Common To All Models

A flat deck provides a comfortable working environment and a fender-mounted roll-over-protective-structure (ROPS) can be folded down when operating under doorways or low-hanging branches.

Wet disk brakes and a horizontal exhaust add to reliability and operator convenience.

MF implements are job-matched to the power output of each tractor and include rotary cutters, Quick-Attach loaders, Quick-Attach backhoe, front dozer blade, and mid-mount rotary mowers. MF 1200 Series compact tractors are designed so more than one implement can be mounted at the same time. There is no need to change implements when changing jobs.

This MF 1250 tractor is one of six new Massey Ferguson 1200 Series compact tractors from 17 to 35 horsepower that are designed for more operator comfort, greater ease of use, and increased productivity.

## Registration Approved For Biological Insecticide

WILMINGTON, Del. — Growers across the country have a new biological insecticide in their arsenal against lepidoptera insects.

"Biobit" HP, a high-potency bioinsecticide from DuPont, has been approved by the Environmental Protection Agency (EPA) for use on a broad spectrum of agricultural crops.

"Biobit" HP is a double-strength formulation of "Biobit" WP wettable powder. "Biobit" is the trade name for the Bacillus thuringiensis (Bt) product marketed by DuPont.

Bts are naturally occurring bacteria that have proven effective in the control of lepidoptera larvae such as loopers, armyworms and bollworms. Lepidoptera insects are a common threat to many types of vegetables, fruits, and fiber crops.

"Biobit" is harmless to humans and the environment, and the concentrated HP formulation makes it easy to use. "Biobit" HP comes in one- and five-pound bags which are easier to handle and mix than the 10- and 25-pound containers that have been used for packaging

"Biobit" WP.

"With 'Biobit' HP, growers need less material to achieve the same effectiveness they've come to expect from 'Biobit' products," said Laure Kenyon, "Biobit" product manager. "And its double-strength formulation means 'Biobit' HP can be handled in smaller packages that are easier to haul and mix in the spray tank."

The active ingredients in "Biobit" HP are the Bt spores and protein crystals that are formed during the fermentation process employed to produce the bacteria. The spores and proteins in "Biobit" HP act as biological stomach poisons in larvae, effectively controlling worms that eat it.

"In extensive field studies, 'Biobit' HP demonstrated excellent control of lepidoptera insects in the early instar stages," said Kenyon. "Young larvae that eat it off of treated crops stop feeding within hours and die within two to five days."

"Biobit" HP's unique action against lepidoptera insects makes it an ideal tank-mix companion with other insecticides such as "Vydate," "Lannate," or "Asana"

XL. Such combinations can extend the spectrum of activity against pests while providing for longer residual in the field.
