WHY ARE THESE THE FASTEST MOVING BALERS AROUND?

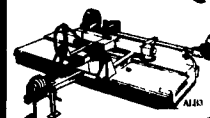

It's simple. You get uniform bale density throughout the bale — density you need for solid, stand-up-tall bales. Bales that hold their shape and, therefore, preserve hay quality.

If your bales stay round, they shed water better. And since John Deere bales won't flatten or "slouch", there is less bale surface touching the ground to wick-up moisture. Dramatically reducing spoilage.

Kuhn's FC series of Mower Conditioners — faster cutting, faster drying, better hay.

Kuhn applied over 160 years of research to build a mower/conditioner that cuts quicker (7-9 m.p.h. — 6-7½ acres/hour) and requires less dry down than many other systems on the market. And Kuhn's FC series is easy on your crop. With a choice of finger comb or roller conditioning, you can match your crop type for even and gentle conditioning with less nutrient loss.

• FC 250 RG Mower Conditioner, 8'2" Cut, Roll Conditioner

GYROSTAR GRS25N COMBINATION RAKE/TEDDER

The efficiency and effectiveness of both rake and tedder, two unique machines combined in one frame.

• GRS25N Rake Tedder
EXCEPTIONAL VALUE \$4,290

Kuhn's Gyrorake turns hay-making upside down with the 3-in-1 rake, windrow inverter and tedder.

Windrow inversion is an essential process that not only allows hay to dry faster, but also decreases leaf loss as it increases nutrient levels. Get the job done fast with a Kuhn Gyrorake. It lets you match rotor and ground speeds to your crop conditions for gentle, efficient inverting.

But when it comes to Kuhn Gyrorakes, windrow inversion is just part of the story. The GA series offers gentle, high speed raking without roping. Side delivery enables you to double windrow. And if needed, the Gyrorake also is an effective tedder for stuffing and drying hay.
