POURED SOLID CONCRETE

STORAGE SYSTEM SPECIALISTS

START WITH THE BEST!

POURED CONCRETE WALLS

You get about 40% more concrete for your dollar with a poured, solid concrete basement as compared to a hollow core block basement.

A poured solid concrete basement weighs about 50 lbs. more per cubic foot! Far denser. What's more, poured solid concrete walls are monolithic ... there are no joints!

This is why laboratory tests show poured, solid concrete basements have many times the flexural and compressive strength to withstand the side and down pressures caused by earth, wind, water and building loads and the material density to resist water penetration.

Best of all, thanks to modern and efficient construction techniques, poured, solid concrete basements are competitively priced.

Solid Concrete For:

- Manure Pit Walls
- Hog House Walls
- Barnyard Walls
- Chicken House Walls
- Retaining Walls
- House Foundation Walls
- Silage Pit Walls
- Cistern Walls
- Concrete Decks
- Concrete Pit Tops
