TOP 10 REASONS WHY YOU SHOULD BUY A

TANCO BALE WRAPPER

TANCO

COMPETITION

1. Five (5) points of support on turntable: Four heavy duty rollers add stability and support to the perimeter of the turntable in addition to the main central shaft. This allows Tanco wrappers to safely wrap the heaviest silage bales on rough or uneven ground.
2. Single solid belt on turntable: The single belt enables Tanco wrappers to effectively wrap misshapen or soggy bales providing a positive surface for bale rotation.
3. Adjustable extendable axle: On trailed models the extendable axle provides a wide, stable wheel base when loading bales. Eliminates the need for counter-weights.
4. Top rollers on turntable: Extra rollers provide security to keep bales in place when wrapping at high RPM's (25) or on uneven terrain.
5. Unloading ramp on trailed models: The ramp allows bales to be unloaded gently. When a wrapped bale falls hard it can "burp". Once it "burps" the bale does not reseat. The ramp gives a smooth transition between the ground and turntable.
6. Turntable braking System: When unloading wrapped bales it's important that the turntable doesn't move out of position. A twisted turntable can offload a bale crooked, exposing it to possible tearing of plastic on frame parts. Tanco machines are equipped with a braking system that holds the turntable in place when unloading bales.
7. Film indexing system: As temperature rises, plastic stretches more. To ensure proper overlap and complete coverage when it's hot outside, Tanco machines are equipped with an exclusive, simple indexing system to compensate for those times. The operator can eliminate potential "windows" in the wrapping procedure.
8. Positive bale positioning: while being wrapped, bales are rotated the exact distance required to obtain optimum coverage.
9. Durability: Tanco's subframe is the heaviest of any machine available in North America. The low profile design keeps silage bales closer to the ground with a low center of gravity for stability. Tanco's features are the result of years of experience and input from hundreds of individual, and commercial users in Europe.
10. Prices: From a basic 3 point Model AW200, to the trailed Model AW400 with automatic cut & start, bale and batch counter, and tractor seat controls, Tanco prices for 1993 are lower than ever. Pay less for more features and durability than any other bale wrapper on the market.

Competition uses one central shaft to support the entire turntable mechanism.

Competition uses either no belts between rollers, or multiple belts which can allow bales to sag and slip.

Competition must add counter-weights or tandem axles as options to effectively handle silage bales.

Competition - None.

Competition - optional drop mats are available.

Competition - either no system, or rely on hydraulics to hold the turntable.

Competition - None.

Competition uses continuous hydraulic advance. Bales can slip or over-rotate giving an uneven wrap.

Competition - Compare.

Competition - Compare.

SEEING'S BELIEVING:

We welcome pre-season demonstrations to interested customers. Contact your local dealer to arrange a demo and more information on Tanco wrappers.

New Vicon GMR Mower Conditioners are even better than before. For high capacity performance, nothing else can make this cut.

Vicon's original KM mower conditioners set new standards for clean cutting, no plug productivity. Now, with introduction of the new GMR series, field performance has reached new levels of efficiency, with more strength, more stability and even better cutting and conditioning than before.

Vicon engineers listened
 • Mainframes are stronger, with less weight. Completely redesigned with a lower profile and welded side panels to deliver the endurance and stability you need to keep harvesting on schedule.

• New FLAT, STRAIGHT cutterbars have improved bearings and single, one piece skids to protect the full cutterbar length.
 • Conditioning rollers are set in low behind the cutterbar at a 25 degree angle to streamline crop flow, leaving high, fluffy swaths for fast curing and drying. A new

V-belt drive protects the rollers against blockage.

• Noise levels have been drastically reduced with a re-designed front gearbox and mounting for quieter operation.

You can still cut square corners on the move with the new full swivel ball hitch engineered for maximum maneuverability. Plus there's

a new computer designed mechanical suspension system that smooths the ride in the roughest conditions.

These machines are simple to operate with an advanced 3-bladed disc cutting and conditioning system that turns acres into miles of fast curing, nutrient-rich hay.

Choose from three reliable models with working widths of 7'8", 9'2" and 10'6".

Vicon's new GMR 2400/2800/3200 mower conditioners. When average won't cut it.
