WESTFALIA HAS A HIGH-TECH MILKING SYSTEM FOR YOU!

Metatron Will Make Your Milking System Complete!

Metatron Control

Metatron Milk Meter

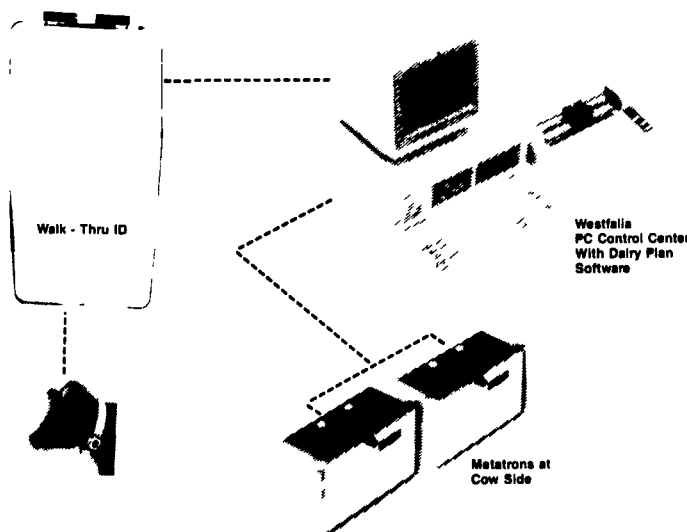

Westfalia's Metatron gives you the most effective, economical herd management system. This DHIA and USDA approved milkside milk meter provides accurate information on an individual cow milking for in-parlor evaluation. Information on milk produced, maximum milk flow, average milk flow and milking time is also available at cowside. Aids you to better manage individual cows.

Metatron Milk Meter is transparent for visible operation and designed for easy use. The unrestricted, full 1" milk outlet takes into account all water and milk flow requirements for high producing dairy cows of today. It's convenient too, and can be on line mounted, or remotely located at the operator's way.

- Can be tied to a Westfalia PC System and ID System for other management control
- Red light easily visible from any point in the parlor to communicate needed information to the dairyman
- SS control, arms, chain, and hardware for maximum life
- Counter balanced arm keeps milker supported under cow with less fall-offs. In case of a fall-off it keeps the milker out of the manure
- Maximum strength SS arms and rubber shock absorber take cow punishment
- Will work with Westfalia Stimulator pulsator or backflush systems
- Precise electronic milk flow monitoring for accurate and dependable take off
- In-line Milk Meter displays milk produced

WALK THRU AUTOMATIC ID SYSTEM

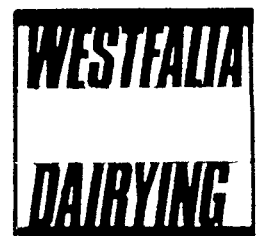

ID SYSTEM

Westfalia provides a unique Walk-Thru identification system, activated by a coded unit on the cow's comfort collar which identifies the cow to a particular ID number. The Walk-Thru ID can be mounted at the entrance of the herringbone stall or a parallel stall to identify individual cows as they walk through.

MANAGEMENT BY EXCEPTION

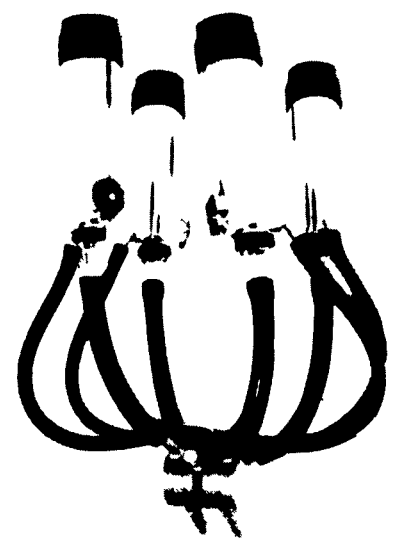

Sophisticated technology that's simple to use, Metatron can be connected to the Westfalia PC Operating System with Dairy Plan for an integrated management program. The system will automatically notify the operator if a cow is off milk after cluster removal. Once a cow ID is entered, the cow side control box automatically signals for observations of cow for heat, do not milk, or health code needs. This provides early and economical detection of possible health problems, allowing the operator to concentrate on individual cows.

Westfalia's
BIO-MILKER

The Bio-Milker Multiplies Your Profits -
It's The Best Way To Better Milking!

Specially designed to regulate your milking operation, this positive pulsed air bleed milker assures harmony between udder and cluster. Milks with lower vacuum levels even in stanchion barns with a high milk line.

- Healthier Udders
- Reduced Milking Times
- Superior Milking Out
- High Milk Yield
- Reduced Cell Count
- Longer Productive Life Of The Cow
- Increased Profitability In The Shed
