ROTO-MIX IV

First we made it process and mix baled hay, then we made it affordable.

It is now possible, in most cases, to mix baled hay and other roughages without a tub grinder...the ROTO-MIX IV with the ROTO-HAY PROCESSOR™ (Patent Pending) combines mixing and processing steps into one. The ROTO-MIX IV with the ROTO-HAY PROCESSOR saves time and money by allowing you to grind only what you need, faster and with less shrinkage. The end result is a TMR feed mix that is fresher and less pulverized than the traditional tub grinder method...two things that are very important when it comes to the nutritional value of the feed.

It's all made possible through the technology of the patented ROTO-MIX® Mixing System.

The ROTOR lifts the feed past the wedging point of the lower side auger, giving you a fluffier ration while lowering power requirements. Total feed movement in the mixing chamber eliminates dead spots common in conventional auger mixers.

The ROTO-MIX IV with the ROTO-HAY PROCESSOR is available in truck, trailer, and stationary models with varying capacities.
