

Congratulations

To The 1993 Dairy Of Distinction Award Winners!

WESTFALIA
SYSTEMAT

Key to efficient milking and high milking yield is a stress-free, operator-friendly milking environment. Thanks to newly developed technology, that system is now available. Westfalia's AUTOTANDEM Parlor is the most high-tech system available on the market today, yet it's so simple to use, it can be operated by just one person. Compared to traditional stall configurations, the AUTOTANDEM Parlor can increase milking efficiency by as much as 40% or more per stall!

Your cows receive individualized attention with the AUTOTANDEM System. Each cow has her own stall, and freely moves in and out of it without bothering or slowing up the others. The operator always has a more complete view of the entire cow.

With the AUTOTANDEM, you'll milk more cows per stall per operator per hour. One person alone can handle a double 5 AUTOTANDEM System, milking 80-85 cows per hour. Think about it—eight cows per hour, per stall. Now . . . that's efficient!

7 Reasons Why Westfalia's AUTOTANDEM is the Most Efficient and User-Friendly System Available:

1. **Smooth, Stress-Free Milking**
Slow or high producing cows no longer control how long cows will remain in the parlor. Each cow milks at her own rate and leaves when finished.
2. **Less Stress During Letdown**
In her own milking stall, each cow can concentrate on milking without interruption. Nervous cows or cows in heat do not interfere with any others.
3. **Individual Attention**
Cows stand in the stall lengthwise, fully visible to the operator who can detect health problems and better manage the milking routine.
4. **High Hourly Throughput**
Compared to other milking configurations, the AUTOTANDEM can increase efficiency by as much as 40%!
5. **Fewer Milking Places**
In group parlors, one cow can slow down the entire operation. With the AUTOTANDEM, milking proceeds regardless of any cow's pace. So fewer milking places are needed.
6. **Excellent Working Conditions**
With the udder right in front of you, it's easier to attach the milker. And the stimulating pulsator reduces your preparation workload for you.
7. **Cost-Effective Modernization**
With the reduced number of stalls and high-tech equipment needed with AUTOTANDEM, you'll save money.
