Designed to be splash and dust resistant in accordance with NEC Article 547.

The "Vari-Speed" VENTILATING Control is a SOLID STATE, single phase, variable motor speed controller, designed to automatically ventilate industrial, commercial and agricultural facilities. The Series 50 provides ventilation control in proportion to the error sensed between the controller set point and actual space temperature as monitored by the controller's sensor. As temperature changes, voltage to the fan motor is changed proportionately.

PUMP OUT PIT FAN

Many manure storage pits have been constructed without providing for ventilation of the pit, particularly in buildings constructed several years ago when pit storage was first popular.

A non-ventilated pit results in a build-up of harmful, caustic gases, such as carbon dioxide, hydrogen sulfide, methane, ammonia and mercaptans. Hydrogen sulfide and carbon dioxide are heavier than air and, as the level of pit waste rises closer to the slats, the gases are forced closer to the animals. Results of inhaling these gases may be deep, fast breathing from CO₂. Hydrogen sulfide is one of the most toxic gases to animals and humans associated with liquid manure storage. This gas can cause severe irritation to the eyes and respiratory system and sometimes can result in death.
