Danuser 3 Pt. Post Hole Digger.....	\$650
Shaver 3 Pt. Hydraulic Post Drive.....	\$2,500

THE CLAAS HARVESTER

MAXIMUM FEED QUALITY

To ensure maximum feed quality from maize it is vital to crack every kernel. Digestion of uncracked maize falls as the maize becomes drier. Independent trials have shown the Claas corn cracker to be close to 100% effective. From the cylinder the corn passes through the two large diameter rollers with saw tooth profiles. The rollers run at different speeds to intensify the grinding effect and open up each kernel. It is a fairly tough process so the latest generation of corn crackers take account of the wear involved on the rollers. Nothing can reduce the wear but Claas have cut the cost of repair by making the outer sleeve replaceable. The shaft, drive pulley and bearings can all be reused which cuts down repair bills dramatically. Adjusting the distance between the two rollers is accomplished by turning two handles, easily accessible behind the cab. In no time at all the degree of cracking can be matched to the ripeness of the crop.

RELIABILITY

The CLAAS Cutterbox is a unique balanced design using 2 knives in a V configuration. This forces the cutting action toward the center instead of the outside. This is the secret of their horsepower requirement and good quality of cut.

The New ROTOCUT SILAGE BALER

Cuts Your Crop As It
 Is Forced Through A
 Series Of Knives.

The Benefits:

- Even higher bale density
- Easier distribution of bale contents

Hard to feed crops are aggressively fed right into this baler. Now you can cut and bale rye, barley and oats at boot stage. Bales fall apart - you can throw them down a hay hole and feed them with a fork.

20 NEW WOODS ROTARY CUTTERS IN STOCK AT JANUARY DISCOUNT PRICES!

COMBINING SLOPES — THE MF 3-D CLEANING SYSTEM

Normal cleaning across slopes

3-D in operation

With the MF 3-D system you can operate at the same speed on slopes as on flat land. Daily performance can be maintained.

The 3-D cleaning system provides dynamic slope compensation which means that the upper sieve moves sideways against the slope of the hill. The degree and direction of these movements depend on the inclination of the slope. Quick reaction and of course equal performance in any direction on slopes of up to 20%.

With the MF-3-D cleaning system, the crop is distributed evenly across the full width of the sieves, performance remains stable and output maintained.
