Extension Honors Cooperators, Volunteers

NEWARK, Del. — The Delaware chapter of Epsilon Sigma Phi, the national honorary society for cooperative extension professionals, recognized outstanding cooperators, volunteers, and colleagues during a recent ceremony.

The awards were presented at a special luncheon concluding the 1994 extension development conference in Dover.

The Keith and Richard Carlisle families of Greenwood received the Friends of Extension Award for their generous support over more than 20 years. The families routinely make their farms available to University of Delaware specialists and researchers for test plots, tours, and winter educational meetings. Both brothers are active in numerous farm organizations and have served on advisory committees, providing Delaware extension with valuable insight on issues related to state agricultural needs. Their wives, Carol and Kathryn, volunteer as 4-H leaders and their children are active 4-H'ers.

David Woodward, Middletown, assistant extension director for agriculture and natural resources, received the Distinguished Service Award for his many achievements, first as a Kent County agent and later as an extension administrator. Among the programs he initiated were a highly popular Farm and Fin Tour for area producers and agribusiness representatives, and monthly Friends of Agriculture breakfast meetings to improve communication within the farm community and with government agencies that impact agriculture.

Bob Mulrooney, Newark, extension plant pathologist, received the Mid-Career Service Award for conducting educational programs that have led to improved disease control in soybeans, small grains, potatoes, pickling cucumbers, and other important Delaware crops.

The New Professional Award was given to Jo Mercer, Joppa, Md. As New Castle County horticultural agent, she has created a program that involves more than 100 volunteers and reaches thousands of people.

The Team Award went to Dr. Sue Snider, New Castle, food and nutrition specialist, and county home economics agents Maria Pippidis, Media, Pa., Roxane Whittaker, Dover, and Mary Wilcoxon, Georgetown, for their successful Keep Food Safe educational program. This program has increased the use of recommended food-handling practices by food service workers in Delaware.

Bonnie Lanzet, New Castle, volunteer organizational leader of the Guiding Paws 4-H Club in New Castle County, received the Outstanding Volunteer Award. Under her leadership, the club has become one of the largest 4-H clubs that raises Seeing Eye dogs. Lanzet, who is visually impaired, accepted the award accompanied by her own guide dog, Zabrina.

The Outstanding Youth Volunteer Award was given to Heather Gooden, Wyoming, a 10-year member of the Westville 4-H Club in Wyoming. Besides numerous personal achievements, she serves as a 4-H junior leader in Kent County, is a day camp counselor, and teaches project skills to younger club members.

The Westville 4-H Club, Wyoming, itself received a Volunteer Group Award. A total of 37 members donated 1,056 hours to 16 community service projects in 1993, ranging from creation of a Hospice Tree and a canned goods collection for Hurricane Andrew victims to Adopt-A-Highway, pet therapy, and Stream Watch. Club members also planted beach grass, and provided decorations for residents of the Silver Lake Nursing Home on numerous holidays throughout the year.

Judy Twardus, Newark, a secretary in the New Castle County extension office for nearly eight years, received the Outstanding Extension Support Staff Award.

EPA Rules In Favor Of Ethanol

WASHINGTON, D.C. — The "decision by the U.S. Environmental Protection Agency to require ethanol in reformulated gasoline is good for U.S. corn exports," said Kenneth Hobbie, president and CEO of the U.S. Feed Grains Council. "We are encouraged by the potential growth in the use of alternative fuels in the world market and have market expansion programs in place to increase the export of U.S. feed grains and their co-products."

The council has been working with the Korean fuel and corn processing industries on the advantages of using ethanol produced from corn as an alternative fuel source. Korea has regulations in place to reduce automobile emissions and improve the environment, and they are looking to the United States as a source of information on how to decrease dependency on imported, petroleum-based fuel and improve air quality.

"Ethanol demand in Korea is estimated at 20-25 million galloons, equivalent to 250,000 metric tons (9.84 million bushels) of corn, valued at $25 million. Currently, Korea is not purchasing U.S corn for production of ethanol, but has indicated that they prefer corn as an ethanol source since the major corn-producing nation in the world is a reliable supplier and politically stable," Hobbie said.

The council recently sent a biofuels team to Japan to assess the market and offer concrete recommendations on the development of the ethanol industry. The team noted that a 10 percent market penetration by the United States into the Japanese market would equal 1.25 billion gallons of ethanol or 12.7 million metric tons (nearly 500 million bushels) of corn.

"Feed grains exports remain a vital and constant market for U.S production. Countries around the world look to the United States as a leader in the development of biofuels. The EPA's announcement requiring ethanol as an oxygenate in fuels helps solidify the United States' position as a leader, and provides the signal to our overseas customers that we are the most consistent and reliable source of feed grains for the production of ethanol or can provide the finished product," Hobbie said.
