**Over 3-1/2
Years
Over 120,000
Milking Per
Unit
Less Than
\$30 Per Meter
and Pulsater
Repair Costs**

**METATRON
CONTROL**

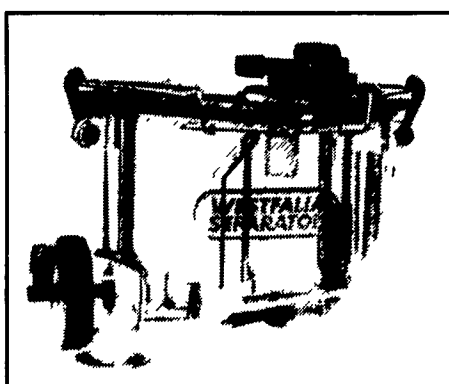

**Easy to use and read,
Also controls
automatic take off.**

The Steve and Ruth Nunes Dairy milks 400 Holsteins in Fallon Nevada. In 1990, the Nunes dairy installed eight Westfalia Metatron milk meters and Stimopuls pulsators in their side opener parlor. Since then, total maintenance cost for both the Metatron milk meters and Stimopuls pulsators has been \$214.54.

Steve's repairs have been to replace any worn rubber goods on the Metatron and Stimopuls. "Any time I replaced a gasket or diaphragm in the milk meter or pulsator, I could easily do it myself without needing a serviceman," Steve says. The parts that do wear out are not expensive. "I have never had a board or major part fail on my Westfalia milk meters or Stimopuls. As far as that goes, I have used Westfalia electronic takeoffs for over 15 years and have never had a circuit board fail."

**METATRON
MILK METER**

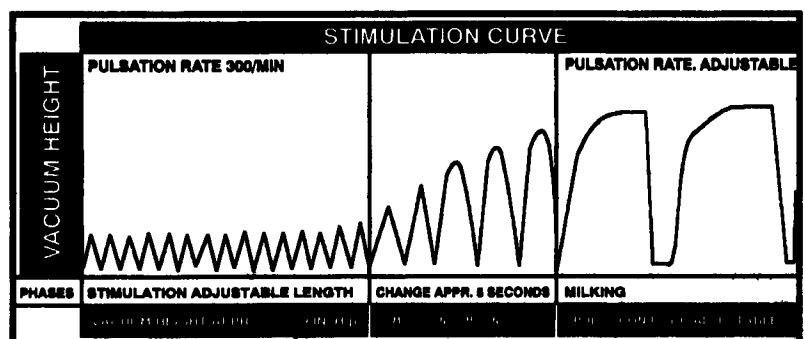

**Simple diaphragm
operation.
DHIA approved.**

Steve's milking experience with Westfalia Metatrons and Stimopuls pulsators have been beneficial to his operation. All cows are properly and consistently pre-milking stimulated by the Stimopuls before milking pulsation begins. Cow milk out is rapid and complete. SCC is less than 100,000. Daily milk records are automatically entered into Westfalia Dairyplan herd management software for daily management activities.

Westfalia Metatron milk meters and Stimopuls pulsation are installed by Liberty Engineering of Fallon, Nevada.

For proven reliability, simplicity, and milking benefits, nothing compares to Westfalia Metatron milk meters and Stimopuls pulsation.
