Binkley & Hurst Bros., Inc. Has A Culti-Mulcher With Quality Features

Weight Transfer is needed on some fields for best mulching results. Unique Farmhand system allows weight to be distributed between the front and rear rollers and the draw bar as needed.

Bearings on torsion-mounted hangers and roller tool bars combine with split roller axles to isolate shock loads. Up to 12 triple-lip sealed, self-aligning ball bearings are used on the main frame of each machine.

Complete Seedbed Preparation in One Pass

Here is how Farmhand Mulchers prepare perfect seedbeds in a single pass. (1) Surface clods are crushed into small particles by the front rollers. (2) Buried clods are then brought to the surface by two rows of looped "C" lines or Danish vibrating lines. (3) The rear set of rollers crumbles these clods, firms the seedbed, presses out the air pockets and leaves a fine seedbed for planting.

Mulching Makes You Money

Mulching your soil gives you better yields in two ways. First, loosely packed seedbeds with many clods allow moisture to evaporate quickly through the air pockets. Lost moisture reduces the speed of germination and gives your crops a less efficient start. Mulching creates a finer, clod-free seedbed with few air pockets and gives your crop a uniform start throughout the field. Moisture rises at just the right rate from the water table below to the seedbed.

Secondly, the small roots of sprouting seeds need a ready supply of soil nutrients. Feeder root systems of small plants in poorly prepared seedbeds cannot break through the clods and reach out for nourishment. Mulched soil allows the feeder roots to reach out in all directions. Thus, nourishment flows through the roots to build strong, fast-growing plants that give you better yields.

We Have A 13'10" Working Width, Model In Stock STOP IN NOW!

Binkley & Hurst Bros., Inc. Has A Quality Clod Breaking Packer For You In Stock Ready For Delivery With Financing Available With Credit Approval!

Breaks clods while it gently firms and levels seedbeds reducing air pockets and moisture loss to stimulate seed germination for uniform plant stands.
