DAYCO SUPER II V-BELTS

Now there's a belt that beats the toughest drive problems.

Innovative design & construction provide extra strength and stamina

Test the Super II v-belt on your toughest drive

Many heavy-duty industrial machines demand more than conventional wrapped v-belts can stand. Their punishing drives make ordinary belts crack under pressure. The result: unnecessary and expensive downtime.

Now there's a solution to the consistent costly problem of replacing or retensioning belts. It's the revolutionary new Super II™ v-belt from Dayco. The Super II belt was designed specifically for the most brutal applications. And its performance blows the cover off conventional wrapped belts.

In heavy torque, high horsepower and extreme shock load comparisons, it's not even a contest. The Super II v-belt is stronger, more flexible, and lasts far longer.

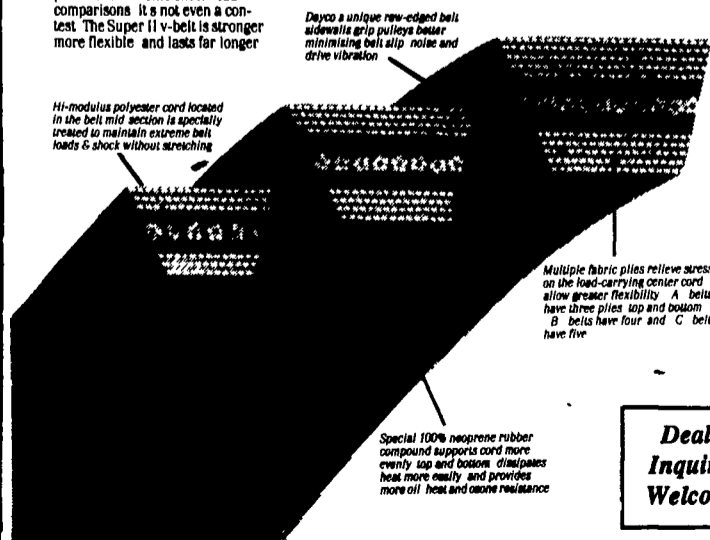

The secret to the Super II v-belt's durability is its unique construction. The central position of the polyester cords in the neoprene rubber core provides greater strength, balance and longer life. Multiple fabric plies top and bottom enhance flexibility. And Dayco's unique raw-edged construction gives it a better grip for controlled slippage.

These attributes combined make the Super II belt superior to conventional wrapped belts in every way.

The Super II v-belt was field-tested for two years on the most severe applications: rock quarry shaker screens, lumber mill tree debarkers, and pipe decalers. In every case, it outperformed conventional wrapped belts by a wide margin. But the only test that really counts is the one you do on your own equipment.

Try the Super II belt on your toughest drive problem. You'll be so amazed by its incredible endurance that you'll want to put it on all your drives. In fact, we're so sure you'll be pleased with the performance of the Super II v-belt that in the unlikely event you're not satisfied, we'll refund the original purchase price, or replace it with a conventional wrapped v-belt.

The Super II v-belt from Dayco. The super problem solver.

Dayco's unique raw-edged belt sidewalls grip pulleys better, minimizing belt slip, noise and drive vibration.

Hi-modulus polyester cord located in the belt mid section is specially treated to maintain extreme belt loads & shock without stretching.

Multiple fabric plies relieve stress on the load-carrying center cord, allow greater flexibility. A belt has three plies top and bottom. B belts have four and C belts have five.

Special 100% neoprene rubber compound supports cord more evenly top and bottom, dissipates heat more evenly, and provides more oil, heat and ozone resistance.

Dealer Inquiries Welcome.
