

Pennsylvania Dairy Princess

(Continued from Page B3)

agricultural events, handing out samples and recipes using dairy products, writing newspaper articles, and preparing messages for radio and television.

Anna Calhoun, who served as Indiana-Armstrong Dairy Princess for 1993-1994, received the Tina M. Shultz Memorial Award for being a dedicated, enthusiastic promoter who willingly went far beyond the requirements to further the image of the dairy industry. The award is given annually to the county dairy princess who is judged to have done the most outstanding job serving her county on behalf of the dairy industry. It is based on the number and types of promotional activities conducted.

Anna made 342 personal appearances and wrote 37 news articles. It is estimated that she contacted about 55,000 people in her 134 school promotions, 44 stores and malls, and attended 41 meetings. She distributed about 8,000 recipe brochures and 9,000 promotional items.

Anna is the daughter of William

and Betty Calhoun of Dayton.

In other business, special tribute was paid to Mim Kauffman for the more than 20 years she served on the board and for the positive influence she had on the many people who worked with her and the county princesses she instructed in speech making and make-up.

In her farewell speech, retiring dairy princess Jennifer Grimes thanked her mother for being "a special lady," her dad, "for being proud," her brother, for clapping the loudest, her boyfriend, for sacrificing his life while she traveled all over the state, and her alternates, who deserved to wear her crown.

The new princess has plenty of hands-on experience in the dairy industry. With her parents, Connie and David Welch, she helps farm the family's 180-acre in Berlin. Natalie owns seven of the 30 head of Holsteins.

A senior at Berlin Brothersvalley High School, Natalie is a member of the National Honor Society, Student Council, and French Club.

(Turn to Page B5)

Natalie is flanked by her parents, David and Connie Welch, her siblings, Matthew and Heather. Another sister Jennifer is in Venezuela for a mission trip.

Members of the Pennsylvania Dairy Princess and Promotion Services Inc. board of directors include, seated from left, Wanda Yoder, secretary; Mim Kauffman, retiring chairperson; and Jan Harding, program director. Standing from left are Betty Reibson, assistant program director, and Beath Heald Moore, treasurer.

During the hospitality hour, guests examined the scrapbooks made by each princess.

Water Quality An IMPORTANT Ingredient In Livestock Management

It's a fact! Contaminated water can have a costly effect on your livestock and poultry performance. Our years of experience plus hundreds of farm related treatment systems has proven the validity and practicality of correcting contaminated water.

CHIMTEK™

ADVANCED CHIMNEY TECHNOLOGY

SAFER: CHIMTEK is designed to withstand severe chimney fires without breaking or transmitting high temperatures to adjoining combustible materials.

LESS CREOSOTE: Wood smoke contains moisture (H₂O). When the smoke comes into contact with a surface under approx. 250 degrees F the water will condense to a liquid. This liquid combined with other products in wood smoke will result in creosote. Creosote can be very dangerous when it ignites. The inside of a CHIMTEK chimney stays much warmer and greatly reduces the amount of creosote formation. In many cases CHIMTEK chimneys are completely clean after years of use.

IMPROVES STOVE PERFORMANCE: The draft produced by a chimney is what pulls oxygen into the fire for combustion. The three main factors affecting draft are the chimney's height, size and temperature. CHIMTEK contains a great amount of a very special insulating material that is not affected by moisture saturation and will not seattle or deteriorate. Poor draft will result in poor combustion. Poor combustion will create more smoke. Smoke is wasted fuel. Newer EPA certified stoves are especially dependent on proper draft to perform properly.

A SURE SOLUTION TO MASONRY CHIMNEY PROBLEMS:

Outer casing of chimney; made of brick, stone, block, or other suitable masonry material.

CHIMTEK INNER LINER:

- Made of volcanic pumice and high-temperature refractory cements.
- Round shape provides even temperatures inside flue, and contributes to efficient flow of smoke and flue gases.
- Highly resistant to thermal shock.
- Even if cracks should occur, the round shape and Chimtek Secondary Liner prevent pieces from falling into chimney.
- The volcanic pumice in Chimtek liners adds considerable insulating value.

CHIMTEK SECONDARY LINER:

- Provides exceptional insulation to make chimney more efficient and reduce heat transfer to combustible materials.
- Provides structural support for inner liner.
- Will not absorb moisture or creosote.
