JOHN DEERE BALERS DELIVER CONSISTENCY, CONSISTENTLY

Building "sure-er," stackable, solids bales is what our proven hay control system is all about. Once hay is inside the baler, a continuous-flow, floating auger moves the crop into a tapered chamber...precompressing the hay before it reaches the bale chamber. This makes John Deere bales denser, and more consistent. A difference you'll notice when stacking and feeding bale after John Deere bale.
