

**GERALD BURKET**

Martinsburg, PA  
(100 cows,  
feed and seed sales)

I don't think there's anything today that a farmer can do that will be more productive for his operation than plant a corn hybrid that is highly digestible. The more forage the cow can utilize the less a dairy producer has to purchase off the farm and the more profitable his operation will be.

If we have a corn plant with improved digestibility we can get more fiber into the cow and at the same time keep a healthier cow, maintain production and also put together a less expensive ration.

As a feed consultant, a ration with digestible corn silage makes my job much easier because I know we won't run into some of the problems that we would have with less digestible hybrids. I've also noticed that higher quality forage will have a tremendous impact on the herd health of cows. The Cargill Menu helps provide consistency and stability in rations. Cows simply eat more with good-quality forages and that's why they move up in production.

**RICK CRAIG**

Everett, PA  
(feed and seed sales)

As a business person, you must use all the tools at your disposal. This has to be something that dairy producers look at. I believe you have to start with a quality product to get maximum milk production.

To discover which hybrids offer the highest profit potential for your farm, contact your local Cargill Hybrid Seeds dealer, or call 1-800-248-9414. Cargill suggests that dairy producers consult a nutritionist or feed consultant to determine the most effective feeding program for their particular operation.
