

When So Much Depends On Planting the Right Seed...

You're In Good Company.

When you have to make seed decisions that will determine the success of your operation, your Northrup King dealer is good company. He offers advice you can trust.

Your dealer knows you can't afford to plant anything less than the best. He also knows you need more than good seed. You need seed that is right for your fields and the way you farm.

As a neighbor, your Northrup King dealer knows this area. He knows the land and what questions to ask to help you choose varieties that can yield maximum return from your fields.

Your dealer listens to your needs. He also has a lot to talk about, drawing on over 110 years of Northrup King history, experience and innovation.

Northrup King leadership in research, genetic engineering, biotechnology and seed technology represent a continuing investment in the future. We want to make sure you have seeds that will meet not only today's needs, but tomorrow's as well.

Our commitment to quality carries through from research programs to precise production and seed conditioning. Innovative technology helps Northrup King seed achieve its full potential under your management.

That's what really counts... the results you get in the fields.

The new Q-Bit™ seed container, in addition to being a more efficient way to handle seed, it is better for our environment. As part of the Load and Go™ seed handling system, the Q-Bit container is one more example of technological leadership.

NORTHROP KING

N4242 RM: 98-102

A top yielding hybrid, N4242 flowers early and dries down very fast to offer maximum return and profitability. It performs extremely well in either drought or cool wet growing seasons. Broad adaptability makes this a popular dual-purpose corn for grain or silage in northern Indiana, Ohio and early maturity areas of Pennsylvania. Superior stalk strength and ear retention. Works well with reduced tillage and continuous corn. Adapts to a wide range of soils and plant densities. Due to early maturity, N4242 is not generally recommended for dryland sandy soils of northwestern Indiana.

S 39-41 (X9339) RM: Late Group III

Achieving a new level of Phytophthora root rot protection, this high yielding variety is resistant to all races found throughout our area (from 1 to 11). New S 39-41 features the Rps1-k gene, which makes it resistant to all prevalent races. With excellent emergence, it is a superior choice for no-till drilling. Very good standability and stress tolerance promote optimum yields. It shows higher protein levels, too. Adapts to all row widths. Similar maturity to S 39-11 and Williams 82. **FVP**

N5220 RM: 105-109

An exceptional dual-purpose hybrid for grain or silage, N5220 displays good standability for top yields. Early denting and extremely fast drydown help this newer hybrid deliver very heavy test weight, high quality grain throughout northern Indiana and Ohio, plus medium-early maturity areas of Pennsylvania. Attractive, healthy plants are best adapted for moderate to high densities on medium to fine textured soils. Responds well to crop rotations.

N6822 RM: 110-114

An outstanding newer hybrid for the Eastern Corn Belt, N6822 displays very good staygreen to maintain high yield potential under continuous corn or standard rotations. Performs well on medium to fine textured soils when planted at moderate to high densities. Semi-flex ears produce good quality, heavy test weight grain. Very good standability and drought tolerance protect yield potential.

High Performance Alfalfas for the East Central Area

MultiKing 1 Alfalfa

Higher Feed Value Means More Value Per Acre.

If your goal is more milk per acre or more dollars per ton, this multi-leaflet variety offers more of what you demand from alfalfa. MultiKing 1 has become the industry standard for relative feed value. It can deliver substantially higher feed value than other alfalfas. Resistant to most major alfalfa pests. It is winterhardy for medium to long-term stands. This high-yielding, Super Prime™ alfalfa recovers fast after cutting. It also maintains quality longer when harvest is delayed. Treated with Apron® fungicide. **FVP**

Viking 1 Alfalfa

Winterhardiness Without Sacrificing Yield.

You don't have to give up high yields to get a winterhardy alfalfa. Viking 1 gives you both. This winterhardy variety produces long-term stands under Eastern disease environments. It has resistance to five major alfalfa diseases, including the high Verticillium wilt resistance needed in north-eastern Ohio and western Pennsylvania. Viking 1 is also stress tolerant. Fast recovery after cutting helps you get the high yields your good management deserves. Treated with Apron® fungicide. **FVP**
