Binkley & Hurst Bros. Has CASE III The Early Riser® Compliancy Plan: (Ready For Delivery).

No Attachments Required

A Case International 950 Early Riser planter is designed to plant in mulch-till and no-till fields as well as it does in clean-tilled fields. Yet you won't have to add costly coulters or down-pressure springs. Plus, no matter what the field's tillage condition, you'll get accurate seed placement, spacing and depth control for fast, complete germination.

The secret's in the design. The exclusive Cyclo® Air metering system and Early Riser row-unit together put seed in a precision-controlled environment, which results in fast starts and bigger yields next harvest. Stop by to find out more about the Case International 950 Early Riser planters the original conservation compliance planters.

6 Row Planter With Dry Fertilizer And Lots Of Other Fine Features

Front Pulled, Equalizing Gauge Wheels- These are connected through a special linkage that maintains equal pressure on the gauge wheels at all times. As one wheel moves up and over an obstacle, the other wheel is forced down. This equalizing action limits opener movement to half the height of the obstacle and results in more uniform depth control and better seed placement. Example: If your customer is planting two inches deep and encounters a 2 1/4 inch root, the equalizing gauge wheels will limit opener movement to 1 1/4 inches, so the seed is planted in the soil, not on top of it.

Earth Metal® Opener Blades - Earth Metal blades are known for their superior wear characteristics and strength. This is especially important to your customers who rely on the planter to do more of the tillage function in reduced tillage operations. They provide increased service life over standard opener blades.

Staggered Disc Openers- Staggered double disc openers use the leading disc to cut the soil and residue and the trailing disc to open the seed trench. This design provides superior cutting efficiency and penetration over parallel double disc openers. This design virtually eliminates the need and costs of add-on coulter attachments common to competitive so-called "no-till" planters.

Furrow-Firming Point - Any double disc opener tends to leave a "W" shaped seed trench that can lead to uneven depth control, inaccurate in-row seed spacing and germination problems. To eliminate these concerns, the Early Riser row unit uses a furrow firming point to remove the seed trench "W" and leave a well-defined "V" trench bottom.

NOTE: Some competitors have tried to tell your customers that the furrow firming point compacts the soil and reduces germination, but this is not true. The furrow firming point isn't as wide or deep as the double disc openers that actually open the seed trench. A rolling disc opener creates a water-wheel effect with the loose soil it's moving. Some of this loose soil falls back into the just-opened seed trench. The furrow firming point removes this loose soil.

Binkley & Hurst Bros. Open House Offers Special Topics of Ag. Community Interest! THIS IS YOUR INVITATION

EVENT: BINKLEY & HURST BROS. INC. ANNUAL CUSTOMER APPRECIATION DAY & OPEN HOUSE
TIME: 7:00 AM - 5:00 PM
DATE: Tuesday, January 31, 1995
PLACE: Dealership Location 133 Rothsville Station Road, Lititz, PA
