ROUND BALER

New Idea 4845 4x5
Round Baler w/Net Wrap - Coming In.

Switch from wrapping with net to twine and back is easy.

HERE'S NOW IT WORKS

1. Start.

The wide, low profile pickup picks up the crop and feeds it through the wide, open-throat directly into the baling chamber by driving over the center of the windrow

2. Form.

Continue feeding hay into the chamber. If your windrow is narrower than the pickup, alternate feeding the windrow on the right and left side to ensure a well-shaped bale. Weaving isn't recommended

3. Stop.

When the dense outer shell has been formed, you'll hear the "full bale" buzzer. You're now ready to wrap and eject the bale by moving to the center of the windrow and stopping

4. Wrap & Eject.

Wrap the bale using the programmable, electronic controller. After wrapping, eject the bale

ENERGY FREE WATERERS

Water comes from the ground normally around 45°-52° F. When the water enters the MiraFount and the closures float up and seal off the drinking ports, the MiraFount becomes a thermo for livestock. Whenever an animal drinks, it removes a quantity of water which is immediately replaced by ground water through the valve. This exchange of water keeps the water warm even in the coldest climate and cool in warm climates. A minimum of 20 head of cattle or 25 head of hogs will keep the MiraFount frost free all winter in most locations.
