

Xtra Consistency

Harness Xtra delivers consistent control across a wide range of growing conditions, too. Because it binds tightly to soil particles, Harness Xtra stays in the weed zone. Even after heavy rains, Harness Xtra is there to provide consistent, season-long control.

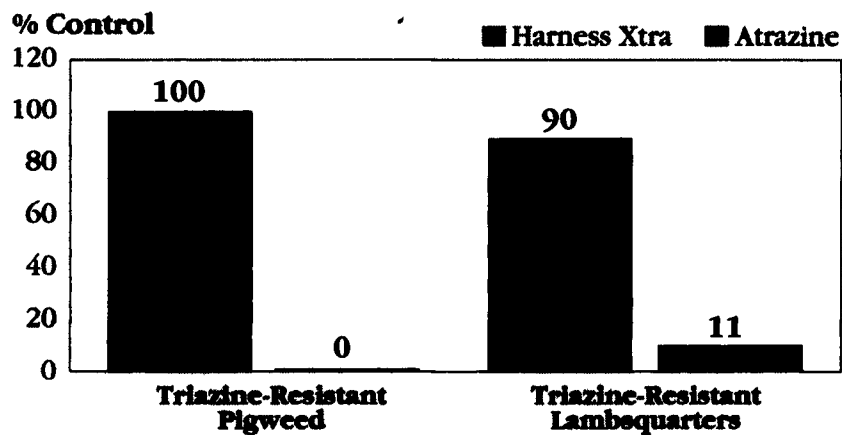

But dry weather is where Harness Xtra really stands out. Acetochlor, the active ingredient in Harness Xtra, needs only one quarter-inch of rainfall for activation in most situations, so it requires only half as much rainfall as some other herbicides to begin killing weeds. In a dry spring,

that can be the difference between relatively clean fields and a weedy mess.

Along with superior control and consistency, Harness Xtra is cost competitive with other premixes. All of which make Harness Xtra the best value in its field.

Harness Xtra Performs Better On Triazine-Resistant Weeds

Source: 1994 Monsanto Product Development Trials
Rates=2.3 qts/A Harness Xtra and 1.5-2.0 lbs/A atrazine

Triazine-Resistant Broadleaf Control

Unlike Bicep[®], Dual[®] and Extrazine[®], only Harness Xtra offers you complete triazine-resistant broadleaf control.

Lambsquarters, pigweed,

and even common ragweed are no match for Harness Xtra. Plus, the ideal combination of Harness and atrazine will produce more consistent control in varied weather situations.

Ideal For Varied Application Methods

Approved Application Method/Timing

Early Preplant: Apply Harness Xtra up to 30 days before planting. You'll spread out your workload and still get season-long control of labeled grasses and broadleaves.

Preplant Incorporated: Apply and Surface Blend[™] or shallowly incorporate Harness Xtra any time within 14 days prior to planting.

Preemergence Surface: Apply Harness Xtra before the crop and weeds emerge and within 5 days after your last tillage trip.

High Quality Formulation

Other premix formulations can settle out in the spray tank, creating a nasty "hard pack." Harness Xtra resuspends after agitation making it superior to other premixes. Plus, Harness Xtra mixes easily with fluid fertilizer.

Use Rates For Harness Xtra

Always be sure to follow the Harness Xtra label directions for best results. Listed below is a guide for application rates based on your soil type.

Harness Xtra Application Rates

Soil Textural Group	Broadcast Rate Per Acre*
Coarse	1.8 quarts
Medium	2.3 quarts
Fine	2.3 quarts

*In areas of heavy weed infestation use up to 2.3 quarts per acre on coarse textured soils and up to 2.7 quarts per acre on medium and fine textured soils
