passes the "winter of '93-'94" test

Remember the c-c-c-cold winter of '93-'94? Wondering what the next one will bring and how your herd will fair?

Install the energy-efficient JUG to reduce concerns about freezing cattle fountains. Even in the coldest weather, the JUG performed, while the competition's waterers did not.

While the JUG's thick urethane insulation keeps the winter cold out, its patented drawtube recirculates water. Cooler bowl water exchanges with warmer reservoir water to keep bowl water open. The JUG will do its job.

A cold weather test conducted by an Iowa college during the winter of '94 demonstrated its energy efficiency. The JUG used only 108 kilowatts of electricity over four months for a cost of \$8.64. A competitor's waterer used 816 kilowatts, costing \$65.28, almost eight times as much. The test confirmed the JUG's energy efficiency.

No other waterer equals the Jug for clean, palatable water. Low maintenance, the JUG also meets the requirements for dairy approval.
