

FORAGE STRUCTURES

Harvestore® Forage Structure

Over 70,000 Harvestore structures have been built in North America. The number continues to grow every year because several features let you increase your ability to store and feed forage at preferred moisture levels: glass-fused-to-steel sheets; steel bolts with plastic encapsulated heads; a breather bag system; a two-way pressure relief valve; gasketed access doors; and, bottom unloading. Penn Jersey, your authorized Harvestore systems dealer, can tell you even more.

The results you may achieve with your Harvestore® System depends primarily upon your management skills and may vary from successful results achieved by others. Any application in a particular farming operation requires the advice of qualified experts and is subject to limitations of good management, weather or other conditions present at the individual location.
