DELMARVA BROILER/FRYER
MARKET. FEDERAL-STATE
Movement of ready-to-cook whole birds

was generally good; seller offerings were adequate and clearing satisfactorily. Live supplies were moderate, instances light; weights were mixed and irregular. Processor schedules were very heavy. Less than trucklot asking prices were unchanged at 51 to 62 cents. Trade sentiment was steady. In the parts complex, supplies of boneless skinless breasts continued to tighten at several plants, but were still at least adequate for immediate delivery. Bone-in breasts were fully adequate. Leg quarters were adequate and clearances were slow in some instances. Wings were adequate to tight.

NORTHEAST BROILER/FRYER PARTS - PART I FEDERAL-STATE

Trucklot buying interest was mostly moderate as dealers looked optimistically towards the weekend and first of the month. Offerings moved into a better balanced position but were still able to satisfy current needs. Retail and distributive movement was expected to be helped by planned retail promotional activity.

"Check calcium separation"

Samples taken at different locations in the same feed line at the hopper outlet, the far end of the house and at the return, often show a wide variation in calcium levels. Both excessive levels (which cause hens to back off feed) and low levels---prevent adequate calcium intake and cause poor shell quality. Oyster shell's specific gravity (0.86) is close to that of a typical layer ration. This helps prevent Ca separation and build up.

For details on sampling for Ca separation, and the use of oyster shells, contact The Fox Co., PO Box 708, Newfield, NJ 08344. FAX 609/697-1692. Phone 800/257-7022.
