NY Phil Frozen Eggs

ATLANTA, GA
JUNE 13, 1995

Prices were unchanged. The market tone

Lancaster Farming, Saturday, June 17, 1995-A5

was generally steady. Demand for current orders was light to moderate, and plants continued to pack previous commitments. Floor stocks of frozen products were at least adequate. Shell egg supplies from regular sources was adequate.

Balanced Nutrition Is The Key

A properly formulated dry cow program allows the dairyman to "manage" the nutrient intake of the cow. Pennfield offers "4" Dry Cow Conditioner products with high levels of fortification. On farm feedstuffs should be tested for nutrient content and combined with the proper Pennfield product.

60 DAY DRY COW PROGRAM (COW WORK SCHEDULE)

1. CALF GROWTH - The majority of calf development takes place in the last Sixty (60) Days before the calf is born. Sufficient nutrients must be provided for the cow to maintain her body weight PLUS the nutrients for development of 50-60 lbs. of calf body weight. The cow will deplete her body reserve if necessary during this period in order to provide the necessary nutrients for calf development.

2. BUILD MILK SECRETORY CELLS - The 60 day period gives the cow time to rebuild the number of milk secretory cells in her udder to produce maximum milk during the upcoming lactation.

3. RESTORE NUTRIENT RESERVES - After meeting body maintenance needs and calf growth, the cow will use available nutrients to restore her body reserves. Body reserves are used to support peak milk production in the next lactation. The majority of body condition should be put on in the latter part of the previous lactation.

4. EXERCISE AND MUSCLE TONE - The 60 day period should be a time for cows to get out of the milking barn and off concrete. An exercise lot or pasture will help the cow rebuild muscle tone.

Round The Clock Service - 24 Hours Per Day
