Congressmen Back Farmland Protection

WASHINGTON, D.C. -Thirty-two congressmen have signed a letter urging the House Committee on Agriculture to make state and local farmland protection programs a priority in the 1995 Farm Bill.

The congressmen are from Arizona, California, Connecticut, Delaware, Massachusetts, Maryland, Michigan, Minnesota, New Jersey, New Mexico, New York, Ohio, Oregon, Pennsylvania, Virginia, and Vermont.

In the letter, the congressmen say the loss of land threatens the economic productivity, scenic open space, watersheds and wildlife, and tax savings provided by farmland.

"The nation is losing over 1 million acres of productive farmland each year to urban development, a loss of topsoil roughly equivalent to that being saved by federal erosion control efforts, stated the congressmen. "A national problem of this magnitude deserves national attention. Farmers who have been turned away from state and local programs because of a lack of resources deserve federal support to help them meet their goals."

Edward Thompson Jr., director of public policy for American Farmland Trust, applauded the congressmen for recognizing the need to step up federal support of state and local farmland protection programs. AFT, a national farmland conservation group, today issued a report calling for greater federal assistance.

"It's time the federal government shifts its conservation priorities somewhat," said Thompson. "Although we are paving over as much soil as we conserve, we are spending 200 times less on farmland protection than soil conservation. A shift of less than 5 percent of erosion control funds into

USDA's Farm for the Future program would double the states' capacity to protect soil from urban sprawl.'

Thompson said other congressional representatives and virtually all U.S. senators remain uncommitted. "Most haven't heard from their constituents," he said. "Yet, stronger local and state farmland protection programs are clearly

something that would benefit their districts or states.

"This is not too much to ask," Thompson said, "to protect a resource as critical as the farmland around our cities, where most of the nation's fruits and vegetables are grown and where open space, wildlife habitat and watersheds should remain undeveloped."
