## CHIMTEK™

ADVANCED CHIMNEY TECHNOLOGY

**SAFER:** CHIMTEK is designed to withstand severe chimney fires without breaking or transmitting high temperatures to adjoining combustible materials.

**LESS CREOSOTE:** Wood smoke contains moisture (H<sub>2</sub>O). When the smoke comes into contact with a surface under approx. 250 degrees F the water will condense to a liquid. This liquid combined with other products in wood smoke will result in creosote. Creosote can be very dangerous when it ignites. The inside of a CHIMTEK chimney stays much warmer and greatly reduces the amount of creosote formation. In many cases CHIMTEK chimneys are completely clean after years of use.

**IMPROVES STOVE PERFORMANCE:** The draft produced by a chimney is what pulls oxygen into the fire for combustion. The three main factors affecting draft are the chimney's height, size and temperature. CHIMTEK contains a great amount of a very special insulating material that is not affected by moisture saturation and will not seattle or deteriorate. Poor draft will result in poor combustion. Poor combustion will create more smoke. Smoke is wasted fuel. Newer EPA certified stoves are especially dependent on proper draft to perform properly.

### A SURE SOLUTION TO MASONRY CHIMNEY PROBLEMS:

Outer casing of chimney; made of brick, stone, block, or other suitable masonry material.

#### CHIMTEK INNER LINER:

- Made of volcanic pumice and high-temperature refractory cements.
- Round shape provides even temperatures inside flue, and contributes to efficient flow of smoke and flue gases.
- Highly resistant to thermal shock.
- Even if cracks should occur, the round shape and Chimtek Secondary Liner prevent pieces from falling into chimney.
- The volcanic pumice in Chimtek liners adds considerable insulating value.

#### CHIMTEK SECONDARY LINER:

- Provides exceptional insulation to make chimney more efficient and reduce heat transfer to combustible materials.
- Provides structural support for inner liner.
- Will not absorb moisture or creosote.
