

HYBRID SEEDS

The Company Behind The Numbers

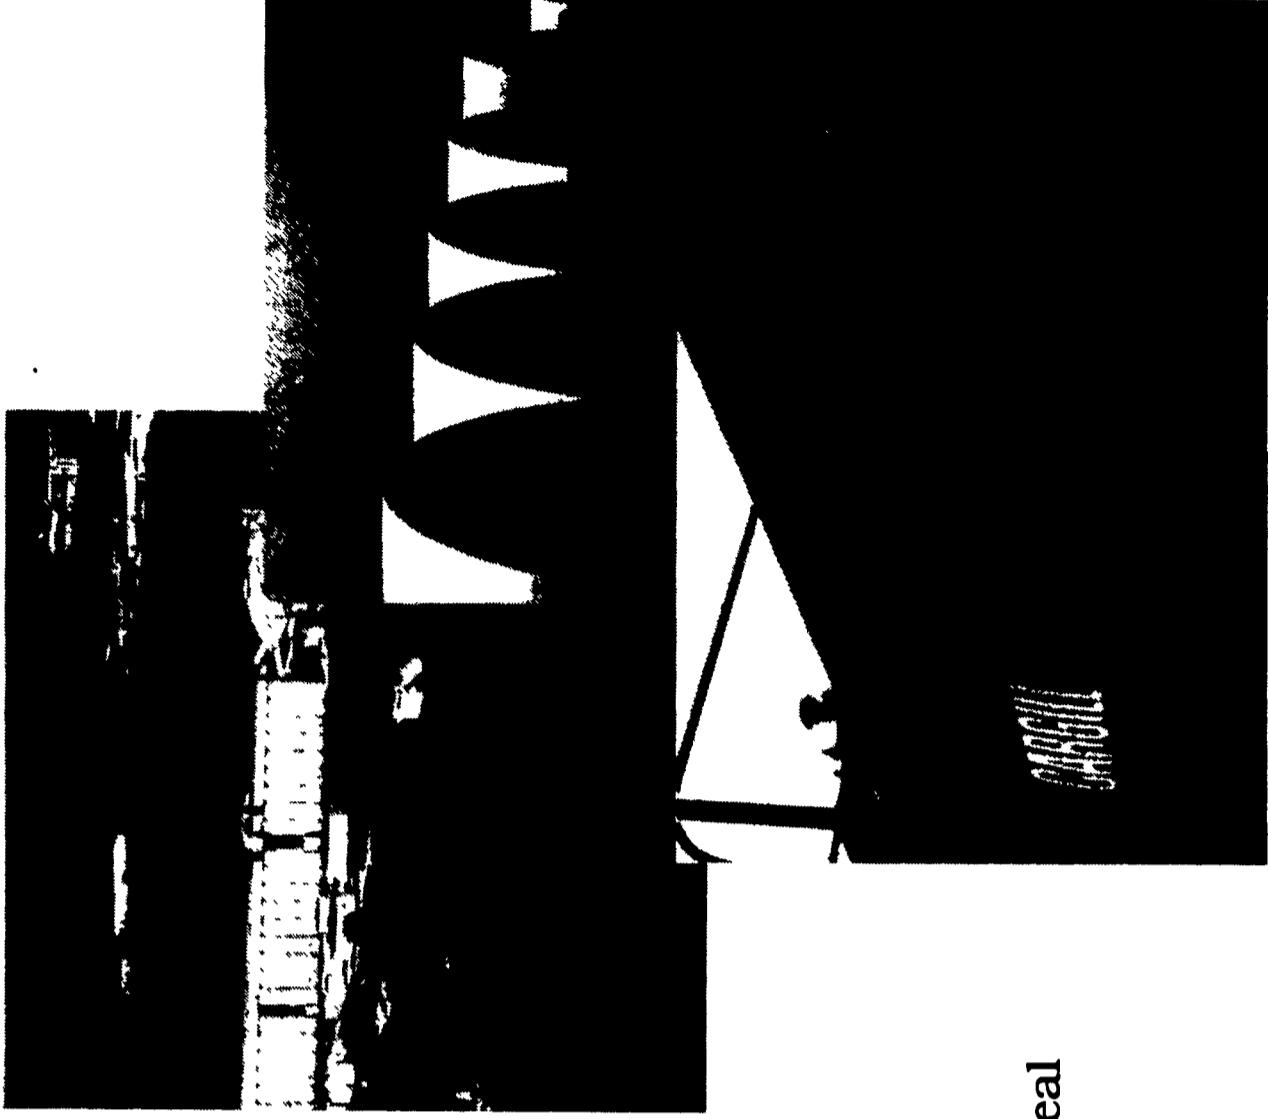

No other seed company can do as much to enhance your long-term profitability as Cargill®. You see, Cargill itself is something of a hybrid. We don't just sell the seed you grow. We use the corn you produce.

Our various divisions continually seek out new uses for corn. These efforts have resulted in innovations like EcoPLA™ biodegradable plastics. Ethanol-based fuels. And a variety of corn wet-milling co-products.

Cargill's unique diversification not only helps drive up long-term demand and profitability for the corn you produce. It also gives us a bigger stake in your success than other seed companies.

That's why doing business with Cargill makes a lot of sense. Not just for great performing hybrid numbers but, for all the numbers you care about.

A CORE BUSINESS THAT BENEFITS EVERYONE

Cargill's financial backing develops technology and manufacturing plants for new crop uses.

- For example these plants produce:
- High fructose
 - Sweeteners
 - Citric acid
 - Degradable plastics
 - Ethanol
 - Refined oils
 - Corn gluten meal

10,000 acres of U.S. corn is needed per day for these new uses.

102 Days

Great yields, fast drydown, late flowering. Excellent choice for reduced tillage.

105 Days
