PLANTING REQUIREMENTS**

The planter you can grow with...

The new KINZE Series II Planters introduce an exciting, innovative modular design concept that offers you total flexibility in planting options plus the most efficient precision placement planting technology

Think of the possibilities!

With KINZE's Single Frame Planter you can plant 30" corn and minutes later convert to 15", even 10" row spacing for beans or for small grains

Or set it up with liquid or dry fertilizer options instead of push units and save the extra trips and expense of other fertilizer application systems

Or you can add the front-mounted Double Frame attachment and do it all—standard rows, fertilizer and split rows. All with the same planter, same drive components, same drive system. Without sacrificing one ounce of that quality KINZE construction

The new KINZE Series II Precision Placement Planters
 More planting options
 More fertilizer options
 More spacing options
 A smoother more dependable drive system
 Like no other planter in the field today!

(Double Frame)

KINZE ROW UNITS

You start with a simple, dependable row unit design with easy adjustments that give you exact depth control, and the most ideal seed-to-soil contact possible. At KINZE we call it "Precision Placement." Simply put, it's the toughest most dependable system in the field today.

How does it work? At the exact point of seed placement, 15" double disc openers and dual gauge wheels combine to mold a clean, consistent V-formed seed trench at a pre-set depth. Trailing V-closing wheels then securely press the seed trench walls on each side of the seed for positive seed-to-soil contact, virtually eliminating air pockets and leaving a loose "hill" of soil on top of the seed. It's the ideal environment for the emerging seedling.

Each row unit is independently adjustable for depth and down pressure. Spring-loaded parallel arms give you all the flexibility you need. Down pressure? Your choice. Standard, quick-adjustable dual springs for conventional planting, or quad springs (shown right) for conservation tillage. Each with four positions so you can set the unit's down force for your conditions.

THE KEY TO EARLY SEED GERMINATION
