KINZE PARTS

See Binkley & Hurst. A Specialist
In Quality Planting Equipment

YOU ASKED FOR IT...

"We really need a six-row planter with a narrow transport width here in the East!"

WE LISTENED...

"Safe transportation of wide equipment on narrow roadways is increasingly difficult!"

KINZE RESPONDED!!

KINZE MFG is pleased to announce the
MODEL 2500 corn and bean planter. This unit was
specifically designed at the request of farmers in
Pennsylvania & New York. We've proven our
excellence in the field, now we've made getting
there and back safer and easier.

KINZE

Discover the simplicity and efficiency of
KINZE 2000 Series Planters. The clean,
uncluttered toolbars. The wide variety of
planting and fertilizer options. The ease of
maintenance. The efficient, mechanical
technology of the KINZE row unit and seed
meters (Seed meters which precisely single-
ulate corn, soybeans, milo and cotton with
more accuracy and more dependability than
any other metering systems in the field
today.) The unique, patented push unit
design which eliminates the cost and con-
gestion of side-by-side units. The ability to
fold flat and adapt.
Discover KINZE today, because the more you
know about planters, the better you'll feel
about KINZE. See your KINZE Dealer for all the
details.

The planter you can grow with...

The new KINZE Series II Planters
introduce an exciting, innovative mod-
ular design concept that offers you
total flexibility in planting options...
plus the most efficient precision
placement planting technology.
Think of the possibilities!
With KINZE's Single Frame Planter
you can plant 30" corn... and minutes
later, convert to 15", even 10" row
spacing for beans or for small grains.
Or, set it up with liquid or dry fertilizer
options instead of push units and
save the extra trips and expense of
other fertilizer application systems.
Or, you can add the front-mounted
Double Frame® attachment and do it
all—standard rows, fertilizer and split
rows. All with the same planter, same
drive components, same drive system.
Without sacrificing one ounce of
that quality KINZE construction.

KINZE ROW UNITS THE KEY TO EARLY SEED GERMINATION

You start with a simple, dependable row unit
design with easy adjustments that give you exact
depth control, and the most ideal seed-to-soil
contact possible. At KINZE we call it "Precision Place-
ment." Simply put, it's the toughest most depend-
able system in the field today.

How does it work? At the exact point of seed
placement, 15" double disc openers and dual gauge
wheels combine to mold a clean, consistent V-
formed seed trench at a pre-set depth. Trailing V-
closing wheels then securely press the seed trench
walls on each side of the seed for positive seed-to-
soil contact, virtually eliminating air pockets and
leaving a loose "hill" of soil on top of the seed. It's
the ideal environment for the emerging seedling.

Each row unit is independently adjustable for
depth and down pressure. Spring-loaded parallel
arms give you all the flexibility you need. Down
pressure? Your choice. Standard, quick-adjustable
dual springs for conventional planting, or quad
springs (shown right) for conservation tillage. Each
with four positions so you can set the unit's down
force for your conditions.
