Box Spreaders
Even when it's empty... it's loaded.

Low profile design means easy loading by skid loader, front end loader or barn cleaner

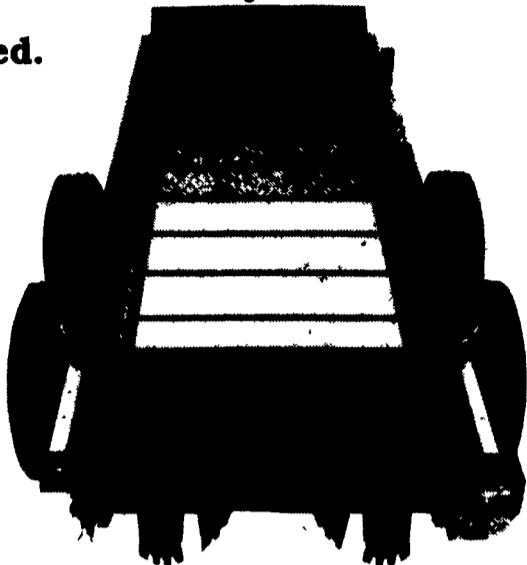

Gehl-Tuff Flooring prevents the apron from freezing to the floor, allowing manure to slide out with little resistance. Less apron pull means less wear and tear on drives and apron chains. One piece construction won't flex under heavy loads.

Extra-strong, T-bar apron chains with an average tensile strength of over 23,500 pounds keep the biggest loads moving.

Double Galvanized steel sides are corrosion resistant for long life. One-piece seamless construction won't catch material or leak.

Optional hydraulic endgate rests in front of the beater paddles to secure sloppy loads and keep heaped material out of the beater unit you're ready to spread. An available litter pan reduces spills in the yard or roadway while enhancing the spread distribution.

Oscillating tandem wheels allow faster ground speeds while providing greater flotation. They're standard on the 325-bushel and 425-bushel models and optional on the 250-bushel model

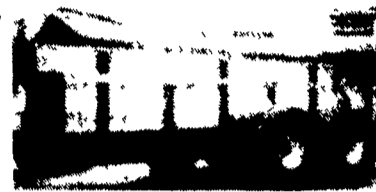

Twelve extra wide one-piece beater paddles are symmetrically positioned for broad, uniform spreads. Paddles are fabricated from tough, 1/4" thick high strength steel. Bolt-on replacement tips are available to extend paddle life.

Constant velocity pto for continuous, smooth, chatter-free power transfer when spreading on turns and reduced stress on the entire drive line.
