Herbicide-Resistant Corn Completes Review

DEKALB, Ill. — Dekalb Genetics Corporation said that its newly developed corn seed resistant to the herbicide glufosinate has received all necessary clearances from U.S. government agencies, and that its glufosinate resistant hybrids may now be commercialized in the U.S.

The Food and Drug Administration and the U.S. Department of Agriculture have both completed their reviews of Dekalb's Glufosinate-resistant corn.

The FDA informed Dekalb that it had concluded its food and feed safety assessment review of corn grain, fodder, and silage derived from the glufosinate-resistant line, and it has concluded that no issues are raised that would require pre-market review by the FDA. Dekalb provided data to the FDA showing that glufosinate-resistant corn is not materially different in composition, nutrition and safety from corn that is currently grown, marketed and consumed by animals and humans.

Separately, the USDA's Animal and Plant Health Inspection Service (APHIS) determined that Dekalb's glufosinate-resistant corn line does not pose a plant pest risk and therefore is no longer subject to APHIS regulations. This determination was based on information provided by Dekalb, a

review of other scientific information, comments received from the public, and field tests.

Dekalb will market test quantities of glufosinate-resistant corn this spring. The herbicide's manufacturer, AgrEvo, anticipates that the U.S. Environmental Protection Agency will approve the use of glufosinate on corn by the 1997 growing season. AgrEvo will market the herbicide under the trade name Liberty™.

Top Crawford DHIA Cows By Protein For April
