

Our Natural Flow System Treats Your Grain Gently.

The unique transverse mounting of the Natural Flow processing cylinder moves your crop in a ribbon-like fashion from the concave through the cage. Your crop never changes direction before threshing, giving you higher grain quality and a better return at the elevator.

Nobody Beats Our System.

Instead of making your grain twist and turn our unloading system has a long reach auger which gives safe clearance into trucks and wagons, even on hilly terrain. Our new grain sample door is conveniently located on the front panel of the grain tank which provides quick safe access to obtain a grain sample. The grain trough delivers grain right to the sample area for increased safety and convenience. Other grain tank features include a full grain tank indicator, and warning buzzer and light on the overhead panel to alert you when it's time to unload.

The Heart And Soul Of GLEANER®

Cleaning Shoe

The new 14.6 inch longer cleaning shoe area contains an adjustable chaffer and sieve to ensure proper cleaning and even finer separation. Recent cleaning shoe upgrades include:

A 4-degree sloped chaffer and sieve to improve coarse cleaning and separation which saves additional grain in slope conditions.

Notched chaffer and sieve control handles ensure positive lower positioning and ease of adjustment.

Front and rear rubber shoe hanger bushes and larger shoe hanger is 75% larger and features chrome sprockets for the clean grain elevator drive systems.

Chaffer

Provides high quality clean straw and higher frequency of adjustments giving you higher harvest rates and higher profitability.

Sieve

Located under the chaffer for fine cleaning. The larger sieve improves cleaning performance and increases profits.

Accelerator Rolls

The new patented accelerator rolls propel grain through the cleaning shoe area with a high velocity air blast. This system accelerates grain on the down side and reduces the downhill shift of grain on the up side which increases the cleaning efficiency and reduces grain loss.

Transverse Flow Fan

The new transverse flow fan blows air through the grain with a straight-through flow. This will give uniform air flow throughout the grain.

Distribution Auger(s)

The new distribution auger(s) in the accelerator rolls in a unique manner to the accelerator rolls. The grain and chaff is separated and the grain is redistributed to the auger(s) which redistributes the grain to the distribution auger(s) for even shoe distribution.

Dual Stage Outlet

The new dual stage outlet at the upper duct and final cleaning stage directs the volume of grain to the upper outlet duct which pre-cleans the grain. The lower duct provides air to the final cleaning. This two-stage cleaning system provides clean grain and cleaner grain samples.

Foreign Object/Rock Door (Opposite Side)

You don't have to worry about rocks and other foreign objects because all GLEANER combines have an exclusive foreign object/rock door that automatically ejects damaging objects before they enter the cylinder and concave. This allows you to run the head close to the ground to get all of the crop. We also have an optional easy-close door with a new latching wrench that reduces the effort required to latch the foreign object/rock door. This allows you to latch the door from the ground, saving you precious time in the field.
