Every grain opened up

The high quality of corn forage produced by the JAGUAR is derived from the CLAAS corn cracker. Two saw toothed rollers run at different speeds with 20% difference open up virtually every kernel and this means good quality silage which is easily digested. This makes for highest energy transfer for r higher milk and meat yields.

The rollers are subject to wear and tear, so the CLAAS corn cracker features removable outer sleeves. The shafts, drive pulley and bearing are all reused, thus reducing maintenance costs. Foreign bodies pass through thanks to a spring loaded mechanism.

The 7.7" diameter of the corn cracker rollers is exceptionally large. The speed differential intensifies the grinding effect for effective opening of the kernels.

The degree of corn cracker intensity is adjustable to take account of differing dry matter content. This is done mechanically. An optional electrical adjustment is available.

Since the corn cracker stays on the machine, the changeover from corn to grass can always with a minimum of preparation. This is a help when grass and corn are being harvested at the same time. The area around the corn cracker ahead of the cooling system is very large, enabling ease of access to parts you wouldn't otherwise be able to reach.

Gentle GIANT.

When it comes to performance, the MF[®] 8570 Rotary combine is an absolute giant.

Its patented rotor system lets you harvest circles around other combines of comparable capacity. Yet it produces outstanding sample quality with extraordinarily little grain damage. One reason is its simplicity of design, with far fewer augers, conveyors, and other moving parts than other combines.

Stop in today and find out more about the amazing MF 8570 combine. Now in Stock.
