

ODOR MANAGEMENT

THE SLURRYSTORE® SYSTEM

Livestock operators of all sizes have at least one common problem - dealing with the odor caused by stored animal waste. One of the latest attempts to manage odors of stored livestock manure is the use of natural biological covers. Several full-scale demonstrations have shown that blankets of biological material floating on top of manure can noticeably help manage the escape of odorous gases that are produced within liquid manure storage areas.

If you're considering manure storage for your livestock operation and are concerned about odor, call Penn Jersey's main office (717-354-4051) or mail the coupon at right to receive the latest university research on biocovers, part of A.O. Smith Engineered Storage Products' ongoing effort to help livestock producers manage their operations.
