

COW NEAR DEATH Survives with help of

VITAMIX

Stephen E. Stoltzfus of Kinzer, Pa., nearly lost his cow until he started using Vitamix.

Stephen states: "I had a cow that had become so ill the vet told me she would be dead within a few hours, however; I wasn't about to give up. I fed the cow 2 heaping teaspoons of **Vitamix** every hour for eight hours and within two days she was up walking around like nothing ever happened. This particular cow's problem was that she had a hard delivery and was internally injured from the birthing process. After the use of **Vitamix** the cow recovered fully, now milks 65 lbs. a day and was bred back after her troubled delivery in just 60 days. Stephen goes on to say, 'I also had a donkey that had a life threatening (terminal), problem and after what I saw **Vitamix** do for the cow, I used it on the donkey. Now the donkey is very healthy.'

"The most recent incident I've had on the farm was a cow that had a quarter completely drop out. It was seriously infected and she was very ill. I used the same dosage as I used for the cow that had just freshened (2 heaping teaspoons of **Vitamix** every hour for eight hours). The cows quarter healed up and she now milks fine on three quarters. In all these cases I did it without a vet or antibiotics but, by using **Vitamix**. The last time I used an antibiotic or a vet was over a year ago and this saves the farm a great deal of money. The usual procedure for using **Vitamix** would be 2 heaping teaspoons 6 times a day except for in more serious cases."

Vitamix is made by the same people who make **Formula M**. Why go looking for a product that **Claims** to be **Similar** to **Vitamix** or **Formula M???** When you can buy the original **Vitamix** and **Formula M** by calling the number below!!!
