

ALL PREGNANT IN PREGNANCY CHECK. FORMULA-M MAKES THE DIFFERENCE.

When I first started testing Formula-M for dairy cows (about 1994) I bought some cows that the Dairyman had been trying to get pregnant for over a year. I gave samples of Formula-M to Dairyman who had cows they had been trying to get pregnant for 1 to 2 years. One cow that I bought was a VG 89 with EXC. Mammary, eight years old with milk records of 29,000; 31,000 and 32,000. At eight years old she was still classified VG with EXC Mammary. I bet the Dairyman was very sorry to lose that one. I fed Formula-M and bred A.I. and she got pregnant. (I sold her to a local Dairyman and she had a bull calf. The Dairyman kept the calf for a herd sire). Another one that we tested on was a Holstein, Jersey cross with a 29,000 m record. She was Jersey color and I believe 3/4 Jersey. I remember that she was the best cow that Dairyman had ever had. We fed those cows Formula-M and they got pregnant. Also, that Dairyman had two mares he had been trying to get pregnant for a couple of years and they both got pregnant after feeding Formula-M. I picked the toughest cases I could find for testing (about 20 cows in all). All but one got pregnant. (One cow had a broken leg and the Dairyman sold her. She **may** have been pregnant also). After that, I started selling some Formula-M to some of the local Dairyman and have been getting reports back for a couple of years now. One Dairyman said "I had a pregnancy check on nine cows and all nine were pregnant". Another checked eleven and all were pregnant; another checked twenty-three and all were pregnant. Another Dairyman had fourteen cows pregnancy checked and all were pregnant. That is about the way it has been going ever since.

Feed Formula-M to all your cows every day and soon you will be reporting that all your cows were pregnant when you had a pregnancy check. With Formula-M your cows will also have **better appetites, & higher energy level. They will digest their feed better, have higher milk production and lower somatic cell count.**

Formula-M is in powder form and comes in a five gallon bucket which cost only \$92.00 (8¢ per day, per cow) and will last about one month for 40 cows.

Put Formula-M in the grain mix; or TMR; or top dress it.

You can have Formula-M tomorrow if you call now. You will start noticing the difference within a week. **Made by the same people that make VITAMIX.**

Formula M, it's what causes babies.
