

The healthiest housing for your animals from a seed company? You bet.

Studies have shown that natural light and proper ventilation provide the best growing conditions for maintaining healthy calves. These calves become contented and productive dairy cows when given the same benefits.

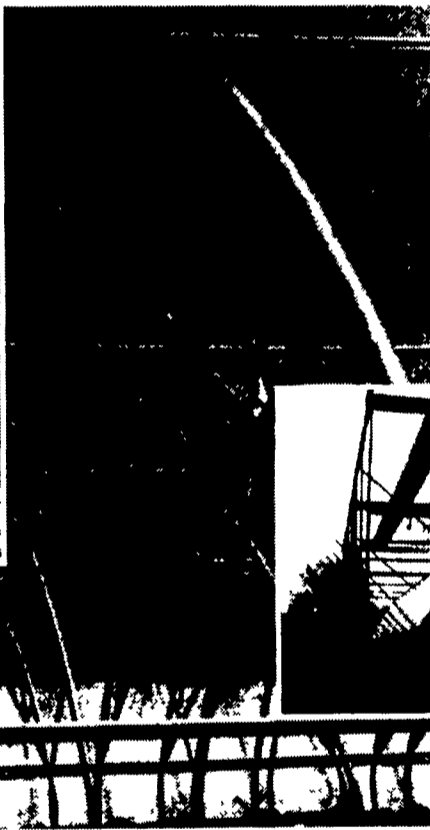

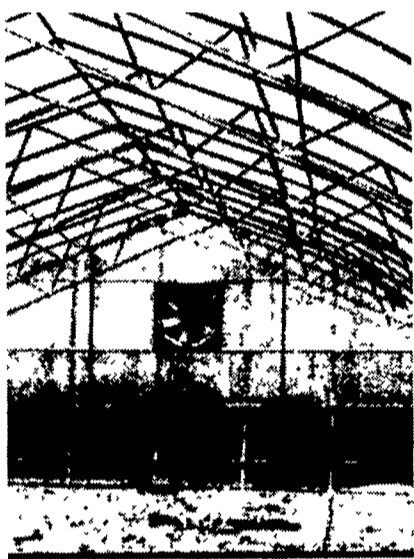

Penn State Seed Company, the name you have always trusted for all your growing and seed supplies has the answer to your housing needs. Greenhouses from Penn State Seed offer many benefits like the improved health of your livestock and increased milk production.

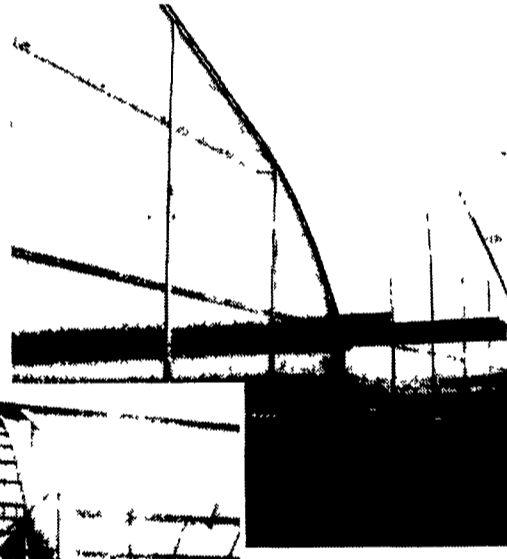

Our sturdy Canadian-built greenhouses offer superior strength to protect your valuable investment. They are competitively priced and in most cases are more cost-effective than conventional stick-built housing.

Call us with an estimate of your size requirements and see how one of our custom freestanding or gutter-connect greenhouses can improve the the health of your cows and your bottom line.

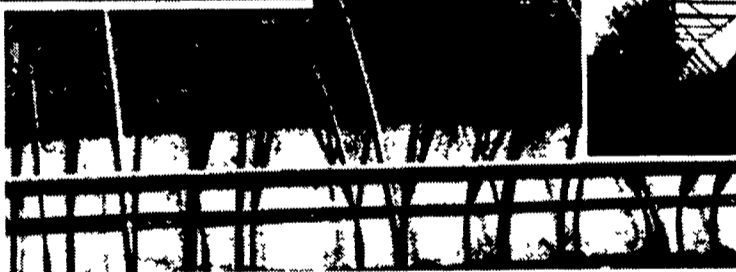

FREESTANDING GREENHOUSES

GUTTER-CONNECTED GREENHOUSES

Roof Vent

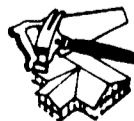

Wall Vent
