

Local Angus Breeder Recognized For Owning Bulls

ST. JOSEPH, Mo. — Fred Frey & Sons, Quarryville, Pa., owns two bulls listed in the 1998 Spring Sire Evaluation Report published by the American Angus Association which is headquartered in St. Joseph, Mo. Issued in both the spring and fall, the new report features the latest performance information available on more than 4,800 sires.

"The American Angus Association has the most complete and comprehensive beef cattle database in the world," said John Crouch, American Angus Association director of performance programs. "Of the sires listed in the main report, 51 percent have expected progeny differences (EPDs) for carcass traits, which should assist cattlemen in choosing genetics that will produce a

more consistent, higher quality beef product."

EPDs are generated from performance data submitted by breeders through the Angus Herd Improvement Records (AHIR) program.

Traits in which EPDs are available include birth weight, weaning weight, milk, yearling weight and height, mature daughter weight and height, and scrotal circumference, as well as carcass traits including carcass weight, marbling, rib eye area, external fat thickness and percent retail product. The analysis for the sire evaluation report is done in cooperation with Iowa State University.

Mitchell Joins Membership Of American Angus Association

ST. JOSEPH, Mo. — Jeffrey Mitchell, Reinholds, Pa. is a new member of the American Angus Association, reported Dick Spader, executive vice president of the national organization with headquarters in St. Joseph, Mo.

The American Angus Association, with more than 31,000 active adult and junior members, is the largest beef cattle registry association in the world. Its computerized records include detailed information on more than 12 million registered Angus.

The Association records ancestral information and keeps records of production on individual animals for its members. These permanent records help members select and mate the best animals in their herds to produce high qual-

ity, efficient breeding cattle which are then recorded with the American Angus Association. Most of these registered Angus are used by the U.S. farmers and ranchers who raise high quality beef for U.S. consumption.

B&M FISHER'S PAINTING & FISHER'S PAINT OUTLET STORE

QUALITY PAINTS @ REASONABLE PRICES

- ALL TYPES OF INTERIOR & EXTERIOR PAINTING
- SANDBLASTING ■ ROOF COATING

DAYCO SUPER II V-BELTS

Now there's a belt that beats the toughest drive problems.

Innovative design & construction provide extra strength and stamina.

The secret to the Super II v belt's durability is its unique construction. The central position of the polyester cords in the neoprene rubber core provides greater strength, balance and longer life. Multiple fabric plies top and bottom enhance flexibility. And Dayco's unique raw edged construction gives it a better grip for controlled slippage.

These attributes combined make the Super II belt superior to conventional wrapped belts in every way.

Test the Super II v-belt on your toughest drive.

The Super II v belt was field tested for two years on the most severe applications: rock quarry shaker screens, lumber mill tree debarkers, and pipe descenders. In every case, it outperformed conventional wrapped belts by a wide margin. But the only test that really counts is the one you do on your own equipment.

Try the Super II belt on your toughest drive problem. You'll be so amazed by its incredible endurance that you'll want to put it on all your drives. In fact, we're so sure you'll be pleased with the performance of the Super II v-belt that in the unlikely event you're not satisfied, we'll refund the original purchase price or replace it with a conventional wrapped v-belt.

The Super II v belt from Dayco. The super problem solver.
