

**NY Phil.
Frozen Eggs
ATLANTA, GA
MARCH 20, 1998**

EASTERN REGION FROZEN EGGS,
MARCH 20, 1998.

FEDERAL-STATE

Prices were generally unchanged except whites were unchanged to lower, mostly unchanged. The market tone was generally steady. Demand continued light to fair, and was generally for immediate needs only. Floor stocks were adequate. Liquid and frozen eggs (ingredients included) processed under federal inspection for the week ending March 14, 1998 in the Eastern Region were 4% less than the week before, and 2% less than the same week last year.

NORTHEAST BROILER/FRYER
PARTS - PART I FEDERAL-STATE

Trucklot buying activity was light with traders unaggressive. Offerings were mixed in their availability, with a larger than usual difference of opinion in regards to values making sales difficult to consummate. Retail and distributive movement was mostly reported as slower than usual. The market tone was highly unsettled with traders cautious and uneasy about making commitments.

1 in Rumen Availability Pennfield's Super Flaked Corn™

THE PROCESS INVOLVES

- 1) Cleaning the corn
- 2) Soaking or steeping the corn for a prescribed period of time
- 3) Applying steam to the corn before rolling
- 4) The specially conditioned corn is then rolled between 2 large rollers
- 5) The wet flat rolled corn is then processed by a special unit that removes the moisture and dries the finished flake back down to normal corn moisture
- 6) The finished product resembles a bright yellow corn flake (makes you want to get a bowl full and add milk and sugar)

WHY IS SUPER FLAKED CORN BETTER?

Flat rolled steam flaking disrupts the cellular structure of the corn kernels (gelatinization) and increases sites for microbial attachments resulting in improved starch (carbohydrate) digestion in the rumen. In simple terms, the cow uses more of the nutrients because the rumen bugs can get to them and much less corn nutrient goes out in the manure.
