**QUESTION** — Maralee Chaffee, LaRayesville, is desper-  
ate to rid their house and lawn of crickets in the fall. They  
usually last two months, at least, until the first killing frost in  
Oct. In the fall, the Chaffees have millions of crickets in the  
yard, which becomes literally black with big black, juicy crick-  
ets. Hundreds are killed with each step to the clothesline. The  
crickets come into the house each night and the family kills  
hundreds each morning when they wake up. The family is  
planning a fall outdoor wedding for one of their children. Do  
they spray now to kill the eggs in the ground before they hatch  
or must they wait until fall to spray malathion and hope the  
crickets eat it and die? (The spray has a noxious odor—not  
nice for an outdoor wedding, but then it might be better than  
crickets crawling on guests). The lawn covers two to three  
acres.

six in a carton. He writes that the dyes were patented Aug. 24,  
1943, which is amazing since raw materials and all efforts  
were going in to support the war effort. Rauhauser under-  
stands that the dyes were invented by a York County man  
from Wrightsville by the name of Raymond Young, who prob-  
ably assigned his invention to the Hinkle Drug Store in Colum-  
bia. Hinkle's continue to sell egg dyes in square bottles, but
