

Perfectly Cut

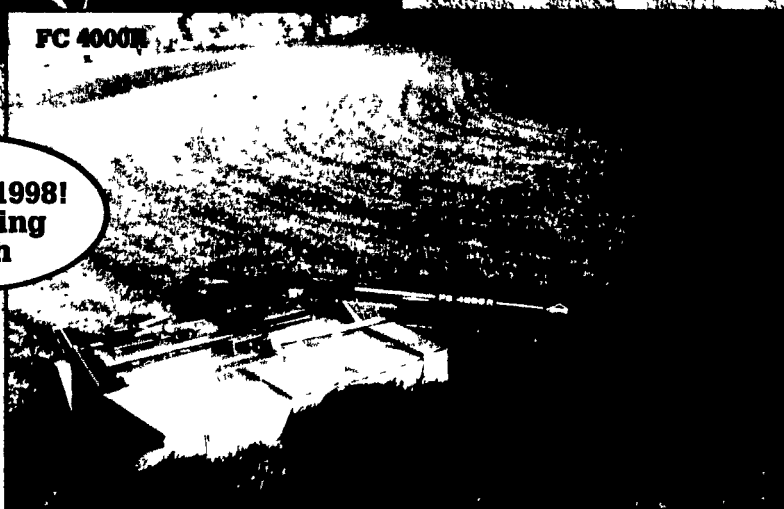

Kuhn Disc Mower Conditioners are specially designed to

FC 4000R

Kuhn pioneered the Disc Mower Conditioner more than 20 years ago in North America, and today offers the most complete line in the industry. Trailed and mounted models are available, fitted with Kuhn's exclusive **Finger/Comb Conditioning** system or with Chevron rolls, working widths from 6' 8" to 16'.

The heart of the Disc Mower Conditioner is the cutterbar. Kuhn's finest, most reliable gear-to-gear "FC" cutterbar features large discs, large gears, and removable disc-bearing stations for easier maintenance and low-cost operation.

FC 4000R

New for 1998!
13' cutting width

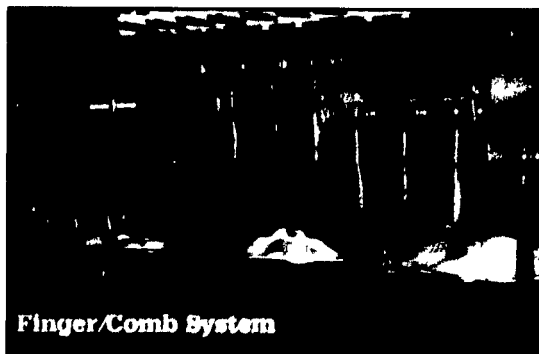

For 1998, Kuhn introduces the new FC 4000R Disc Mower Conditioner with a new tongue, and these features:

- **Dual conditioning systems** with Kuhn's exclusive diamond block rolls for more uniform conditioning available on any rotary type conditioner
- **"Constant Float" suspension** for a soft ride. A unique suspension system provides unparalleled flotation, minimizing vibration and damage to the cutterbar and increasing the life of the machine
- **Centralized gearbox** that reduces the number of gears required to drive the cutterbar and conditioning system

Kuhn's Gyrodine® Hitch offers chatter-free square-cut corners (featured right). Kuhn also offers a **Straight Hitch** for economy (below)

Kuhn's time-proven line of FC machines have built a reputation for years of trouble-free operation, conditioning hay in the most efficient manner. In fact, Kuhn is the leader in Disc Mower Conditioners.

Finger/Comb System

For the gentlest, most thorough rotary type conditioning available, the **Finger/Comb system** provides a better cut and faster dry-down. Traditional roller conditioning is also available.
