

• Just how important are earthworms? Consider some of the functions of earthworms in the soil. Earthworm tunnels will help loosen soil,

make root pathways, redistribute organic matter, drain soil, and aerate soil. One of the biggest reasons earthworms leave a field is when the or-

ganic matter is buried due to heavy tillage. The most number of earthworms will be found in no-till fields.

• How much forage do you lose from deer damage? Some recent studies from the Penn State farms suggest that you can lose approximately 1,660 pounds of DM when deer graze pure alfalfa stands. They also found that deer will graze less when there is some orchardgrass mixed with the alfalfa. If you are planting alfalfa strips near wooded areas or heavy deer areas, you may consider mixing some

orchardgrass into those seedings. Deer grazing preference, in order, was alfalfa, alfalfa/timothy mix, alfalfa/orchardgrass mix.

GEHL
1275 Forage Harvester
WITH EXCLUSIVE CROP PROCESSOR™

A NEW, INNOVATIVE CONCEPT IN PULL-TYPE FORAGE HARVESTER.

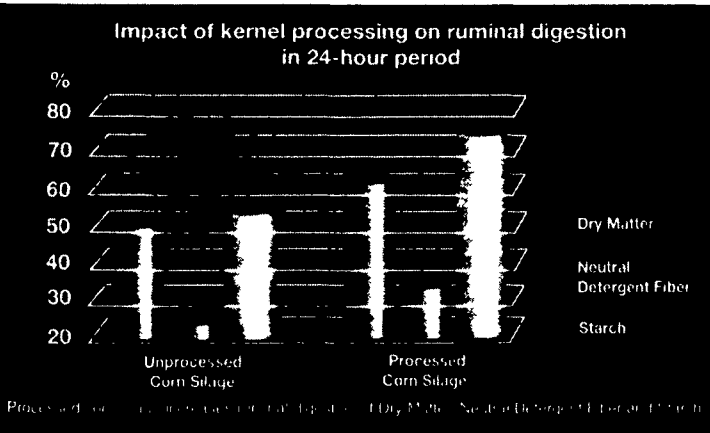

Above, left: The Crop Processor features a pair of high-speed grooved rolls that crack kernels, break up the cob and "condition" the stalk material. The rolls can be removed for chopping haylage.
Middle: A positive multi-band V-belt drive transfers power to the crop processor rolls.
Right: A cross-auger with double flighting quickly, efficiently and smoothly moves processed crop to the high-speed blower.

Specifications and benefits of new Gehl Model 1275

- Largest capacity pull-type forage harvester
- Exclusive Crop Processor™ cracks kernels, breaks up the cob and "conditions" the stalk material
- Crop processing rolls mounted in an assembly directly behind cutting cylinders
- 4-cut processing rolls & 1/2 inch diameter full width - 26 5 inches Rolls driven by four matched double "V" bolts

- Processing rolls with auger swing away to allow access to rolls and cutting cylinder
- Roll gap adjustable to match crop conditions
- Rolls can be removed as an assembly for hay operation
- Unique double flighted auger (12 inches in diameter) operates at 1,000 rpm to feed blower uniformly and efficiently
- Auger is shear bolt protected
- Exclusive Auto-MAX™ system protects blower from plugging

Benefits of processing

The benefits of processed corn silage can easily outweigh the investment. Reports from dairy farmers who have already used a prototype model report increased milk production of two to four pounds per cow per day. These results are confirmed by a recent Washington State University study that show average responses of two to three pounds.

The Most Powerful Blower Made In Stock At Binkley & Hurst Bros., Inc. - 1000 RPM Model 1580 Gehl - Get One Today!

The three main factors that contribute to a forage blower's capacity are tip speed, hopper capabilities and available horsepower. Generally speaking, for optimum capacity, the blower requires at least one horsepower for each foot the material must be blown.

For instance, a blower on a 20-foot-diameter by 60-foot-center silo would require 70-plus horsepower. On a 25-foot-diameter by 90-foot center fill silo you should have 100-plus horsepower.

Horsepower requirements can be reduced with smoother unloading forage boxes and a wider gooseneck at the top of the silo.

Adjustable left tire. Setting up at the silo is faster and easier. The adjustable left axle lets you line up the blower without loosening and adjusting the rim sheet. Simply adjust the tire up or down until you get the matching angle to your pipe.

Swing away blower outlet. They're more than tremendous blowing capacity designed into these blowers. Gehl swing away outlet makes it easier than ever to check fan paddle and rim sheet clearances and for rim sheet liner replacement. (Note this outlet should never be opened until the pto is disconnected from the tractor and the blower disc has stopped turning.)

Choose The Gehl Blower That's Right For You

With three models it's easy to match a high-capacity Gehl blower to your operation. In side by side tests at a 100' silo, Gehl blowers out-performed the best the competition had to offer, with the Model 1580 cleaning out an 18 self-unloading box full of haylage 18% faster than the closest competitive blower and 25% faster than one of the so called 'leaders'.

Gehl's secret is the twin spinner delivery system and the twin-sided fan. Two 24-inch spinners rifle your crop into the blower fan at nearly 35 mph. There, the twin-sided fan, with paddles on each side, blows the material up the pipe with ease. It's almost like getting the performance of two blowers in one.

Gehl blowers are also loaded with on convenience features you're sure to appreciate.

As a guideline, we recommend the following:

Silo size	HP required	Gehl Model
20'Wx60'-70' high	70 hp	FB1540
20'Wx80' high	90 hp	FB1580 (540 rpm) in stock
25'Wx90' and higher	100+ hp	FB1580 (1000 rpm) in stock

Easier, faster fit to silo pipe. Once you have the fit angle between your blower outlet and your pipe. It's easy to slide the telescope pipe into position. This new lip assures proper alignment and fit.

Greater rim sheet life. These blowers feature split rim sheets with a special inner, replaceable liner. This extra hard liner is twice the thickness of ordinary rim sheet steel. In addition, when it finally does wear out, you only replace the liner that fits in the extreme wear area of the blower, right below the outlet. You don't have to replace the entire rim sheet! The result: reduced costs over the life of your Gehl blower.

Tire Guard. This tire guard protects the right blower tire when you're cleaning up around the blower with a silage fork. It is standard equipment on the 1580 and 1560, optional on the 1540.
