

You've Never Seen A Harvest Like This.

Introducing The New 2300 Series Axial-Flow® Combines.

The three new 2300 Series combines are equipped with a high-visibility operator environment so revolutionary, everything else is history.

Wider, amazingly comfortable and designed with convenient cab-forward controls and instrumentation, this cab literally conforms to its occupant. An

engineering landmark – Focalized Cab Mounting – minimizes motion for a smooth, steady ride. A multi-function propulsion lever puts most operations right in the palm of your hand. And an all-new right-hand console moves in tandem with your seat.

At the heart of the 2300 Series remains the strength of the Axial-

Flow combine – the exclusive, patented rotor. And the recent addition of the Cross Flow™ cleaning fan provides a remarkably uniform, powerful airflow throughout the entire sieve area.

Why not stop by and see the new Case IH 2300 Series for yourself? We'll help you discover a better way of looking at your harvest.

If You're Not A Hooper Customer,
**YOU'VE NEVER SEEN SERVICE
LIKE HOOBER SERVICE!!!**

WORKING HARDER Hooper's technicians earn your business every day with in-field combine repair. Hooper earns your business by carrying the largest supply of parts, and routinely gets parts quicker than the competition. When you're sitting during harvest time, you're losing money by the hour. Hooper works harder to get you back faster.

WORKING SMARTER Hooper's crew of combine technicians have been gaining experience for over 20 years. Hooper also invests in schooling at every opportunity, so no competitor has better trained technicians. Hooper also invented the Hooper-Boom, which is used for infield motor removal and has developed techniques that have surprised even the factory engineers. Hooper works smarter to get you back faster.
