New Holland Blower #25	\$600

## HARVEST CORN NO MATTER THE ROW SPACING WITH NEW RU450 INDEPENDENT CORN HEAD

Claas of America offers the RU 450 row independent converging corn head for its self-propelled forage harvesters. The RU 450 enables corn to be harvested no matter the row spacing or direction harvested and features a working width of 14'9".

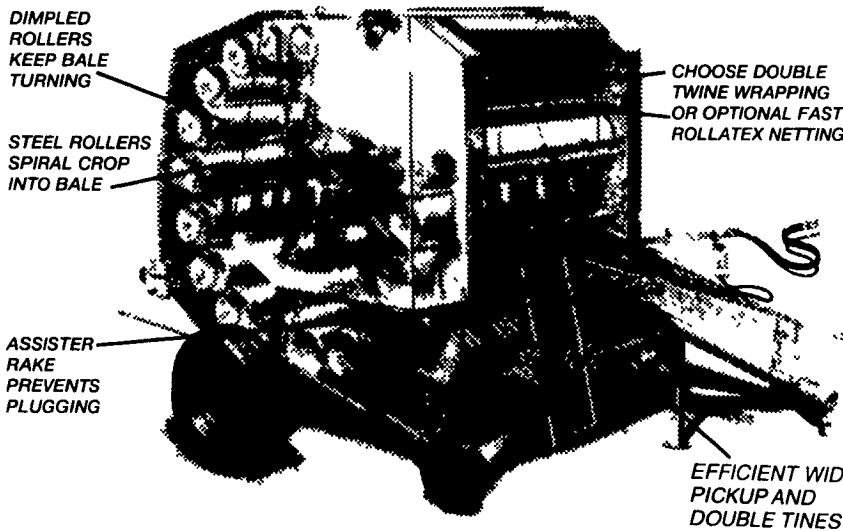

The head features three rotating drums which cut and deliver the crop. Double transport discs on each drum capture the corn plants for crop delivery. The mowing disc, located under the transport discs, cuts the crop and then delivers it to the feed augers. The three-symmetrical rotors assure even crop flow to the feed rollers.

The chainless rotor drive system is made up of universal drive shafts and oil bath gearboxes. Drives are protected by low maintenance overload clutches. With fewer moving parts than a conventional corn head, the RU 450 requires less maintenance resulting in higher output. Transport of the head is done by activating a hydraulic valve from the cab which folds the outer rotors into a vertical position.

Owners say:

**"Tight bales, fast, no trouble"**
