Meeting all your harvesting needs!

## New dimensions in harvesting corn

Corn headers from CLAAS are acknowledged by professionals as setting the standards for high speed silage corn harvesting at every stage of ripeness. High performing JAGUAR foragers can be equipped - depending on you can fit the model - with 4, 6 or 8 row CLAAS headers

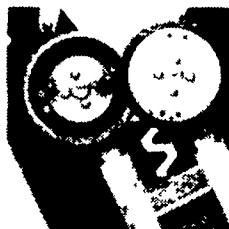

CLAAS also offers the tried and tested 6 row header alongside the 8 row version. It has established an enthusiastic following among contractors and farmers for many years. The outer picking units on the 6 row header are raised manually to reach the travel width of 10 feet.

If you have to harvest very ripe corn silage you can fit the additional rasp floor concave in addition to the corn cracker. Equipped with either 4 or 8 rasp bars, the crop is thoroughly grated including the very hard stems.

The extremely low and slim profile of the dividers collect hanging and laid crops with ease and feed them steadily to the intake auger. The stem dividers above the header support this operation. Three or four header speeds enhance the crop flow. In down corn the additional laid crop augers can be a useful option.

The cutting discs are pretensioned to always work at the right pressure. They are self sharpening and maintenance free.

The CLAAS AUTOPILOT is patented and is an essential tool in the corn harvest. You can harvest without losses even in weed infested or hanging crops, in bad visibility or at night. The forager is steered through the rows fully automatically. You are free to focus your attention on the speed, the intake and chute.

The 8 row header can be equipped with the sensor controlled CONTOUR PLUS height control. The header hovers over the ground with no ground pressure, a big plus on soft or spongy ground.

The 8 row header is moved from the working position to the transport position in a matter of minutes.

It is simply folded up hydraulically.

The 8 row corn header in front of the JAGUAR 880 lets you set up new output records. The combination of the JAGUAR 860 and the 8 row header is another ideal mix. The benefits are clear - fewer tracks in the field, reduced turning times, more flexibility when opening up the fields, reduced harvesting speeds whilst achieving virtually the same output. Of course, there's no need to remove the 8 row header for road travel.
