Meeting all your harvesting needs!

The inside story on the ultimate harvesting machine.

**MASSEY FERGUSON 8780**

**Rotor intake.** Hardened auger fighting moves crop from the conical rotor intake area to the threshing area

**Threshing area.** Hardened threshing elements smooth crop flow while rasp bars rub crops against the concaves to efficiently dislodge the grain

**Concaves.** Seven sections with 140 degrees of wrap provide more than 2,200 in<sup>2</sup> of area for gentle, yet complete threshing

**Grain tank.** 230-bu tank has folding extensions to reduce combine height to just 148 in

**Sweeps, knives, and vanes.** Rotor sweeps ensure crop rotation generating centrifugal force to separate remaining grain. Angled, stationary vanes above the rotor direct crop flow to the rear. Knives stir and break up crop bunches to help ensure grain separation

**Turret unloader.** Buttons on the multifunction handle in the right-side console let you swing and engage the auger for 159-in discharge height and 239 in of reach from the combine center

**Grain sample door.** A chute delivers the first bit of grain to the access opening to facilitate quicker adjustments to changing conditions

**Front feed beater.** Patented beater accelerates crops leaving the feeder chain, separates stones from the crop flow, and consistently feeds the rotor through 360 degrees to enhance performance

**Feeder system.** Wide, 44-in width matches the exceptional rotor capacity. Downtime is reduced with a feed system reverse, operated from within the cab, to quickly clear feed system and header

**Rotor drive.** Hydrostatic motor provides precise digital control of rotor speeds. A rocker switch in the cab provides easy, full-power rotor reversing

**Separating grates.** A full 180 degrees of wrap provides 2,241 in<sup>2</sup> of separating area to effectively separate remaining grain

**Direct discharge.** Patented system ejects residue directly from the rotor without power-robbing beaters for increased operating efficiency, reliability and straw quality

**Residue disposal systems.** Choose from direct discharge for baling, dual-speed chopper, dual-speed, high-velocity chopper for wider spread, and twin, dual-speed spreader

**Stone trap.** Protects your combine by capturing and storing rocks for later disposal.

**Cleaning fan.** Monitor and adjust fan speed from the cab to ensure proper cleaning under changing conditions.

**Cascade chaffer pan.** Delivers crop from the grain pan to the front of the chaffer to ensure full utilization of the cleaning area

**Returns system.** Large augers and elevator maintain harvesting rates in high-yielding crops

**Pressurized cleaning shoe.** Front 8 in of lower sieve area is nonadjustable airfoil material. Along with a large chaffer and lower sieve, this produces a total cleaning area of 6,815 in<sup>2</sup>
