## MAXI-DRY® Layer Cage Systems

## MAXI-DRY®

### Overhead Manure Drying System

The unique "Maxi-Dry" system is an exclusive patented (OHMD) manure drying process that utilizes existing warm air inside the house and exhausts it over the manure belts located in an air drying duct over the cage row. The drying process is complete in 24 to 72 hours, resulting in up to 15% moisture organic fertilizer, all of which is accomplished with a minimum of energy and without disruption of the normal house temperature

- Dries and conveys manure automatically
- Low energy requirement
- Utilizes existing air ventilation
- Dries manure usually in 48 hours or less
- Reduces odor and fly problems
- No filter system required
- Easily conveys, pellets, composts or spreads
