Chopping quality is extremely important for silage and also digestion of the feed. Sharp knives and a precisely adjusted shearbar guarantee a clean cut and even crop flow. Four intake and precompression rollers - two upper and two lower rollers - compress the crop densely and transport it to the chopping cylinder. The latest generation of metal detectors is located in the lower front roller. The gearbox provides for 6 different chop lengths. The changeover between two lengths in each range can be done at the touch of a button. The impressive CLAAS chopping cylinder on all JAGUAR models is a full 29.5" wide with 24 knives in V-formation gives 28,800 cuts per minute. The shearbar is adjusted to the knives without tools.

The result is ease of maintenance, with contact adjustment and a power saving cut, plus excellent forage quality.

The high quality of corn forage produced by the JAGUAR is derived from the CLAAS corn cracker. Two saw toothed rollers run at different speeds with 20% difference to open up virtually every kernel. This means good quality silage that is easily digested.
